

WRITTEN STATEMENT FOR THE RECORD

THE HONORABLE ROBERT "PETE" SMELTZ
COMMISSIONER, CLINTON COUNTY, PA.

ON BEHALF OF THE NATIONAL ASSOCIATION OF COUNTIES

ON THE DEFINITION OF "WATERS OF THE UNITED STATES" PROPOSED RULE
AND ITS IMPACT ON RURAL AMERICA

BEFORE THE U.S. HOUSE OF REPRESENTATIVES COMMITTEE ON AGRICULTURE'S
SUBCOMMITTEE ON CONSERVATION AND FORESTRY

MARCH 5, 2015
WASHINGTON, D.C.

Thank you, Chairman Thompson, Ranking Member Grisham and members of the Subcommittee for the opportunity to testify on the impact the proposed "waters of the U.S." rule will have on rural America.

My name is Robert "Pete" Smeltz, I am an elected county commissioner from Clinton County, Pa. and today I am representing the Nation Association of Counties (NACo).

About NACo

NACo is the only national organization that represents county governments in the United States, including Alaska's boroughs and Louisiana's parishes. Founded in 1935, NACo assists America's 3,069 counties in pursuing excellence in public service to produce healthy, vibrant, safe and resilient counties.

About Counties

Counties are highly diverse, not only in my state of Pennsylvania, but across the nation, and vary immensely in natural resources, social and political systems, cultural, economic, public health and environmental responsibilities. Counties range in area from 26 square miles (Arlington County, Virginia) to 87,860 square miles (North Slope Borough, Alaska). The population of counties varies from Loving County, Texas, with just under 100 residents to Los Angeles County, California, which is home to close to ten million people.

Since counties are an extension of state government, many of their duties are mandated by the state. Although county responsibilities differ widely between states, most states give their counties significant authorities. These authorities include construction and maintenance of roads, bridges and other infrastructure, assessment of property taxes, record keeping, running elections, overseeing jails and court systems and county hospitals. Counties are also responsible for child welfare, consumer protection, economic development, employment/training, and land use planning/zoning and water quality.

Counties own and maintain a wide variety of public safety infrastructure that would be impacted by the proposed rule including roads and roadside ditches, stormwater municipal separate storm sewer systems (MS4), green infrastructure construction and maintenance projects, drinking water facilities and infrastructure (not designed to meet CWA requirements) and water reuse and infrastructure.

On roads and roadside ditches, counties are responsible for building and maintaining 45 percent of public roads in 43 states (Delaware, North Carolina, New Hampshire, Vermont and West Virginia counties do not have road responsibilities). These responsibilities can range from intermittent maintenance, such as snow plowing, debris cleanup, short term paving and surface repairs to maintenance of traffic safety and road signage and major long-term construction projects.

Many of these road systems are in very rural areas. Of the nation's 3,069 counties, approximately 70 percent of our counties are considered "rural" with populations less than 50,000 and 50 percent of these are counties have populations below 25,000 residents. Any additional cost burdens are challenging to these smaller governments, especially since rural counties have the most road miles and corresponding ditches. Since state constitutions and statutes dictate and limit the revenue sources counties may use, balancing increased federal and state regulations with the limited financial resources available to local governments poses significant implementation challenges.

Regardless of size, counties nationwide continue to be challenged with fiscal constraints and tight budgets. According to a 2014 County Economic Tracker¹ report released by NACo in January, only 65 of the nation's 3,069 counties have fully recovered to pre-recession levels, due to their booming energy and

¹ Nat'l Ass'n of Counties, *County Tracker 2014: On the Path to Recovery*, NACo Trends Analysis Paper Series, (2014).

agricultural economies. However, in many parts of the country, the economic recovery is still fragile. In addition, county governments in more than 40 states must operate under restrictive revenue constraints imposed by state policies, especially property tax assessment caps.

About Clinton County, Pennsylvania

As a county commissioner, I interact with constituents and businesses on a daily basis. Prior to my election as a county commissioner, I spent 35 years with the Pennsylvania State Department of Transportation (PENNDOT) and managed over 300 highway road miles and their drainage systems.

Clinton County, Pennsylvania is considered “rural” with a population of just under 40,000 residents. The county is located in north central Pennsylvania and has a land mass of 897 square miles—the northern and western parts of the county are heavily forested and mountainous and the southern section has an agriculture-based economy. Approximately 70 percent of the county is forested, 20 percent is farm valley and 10 percent is developed. The average yearly salary for our residents is \$36,000 and our primary economic drivers include paper product facilities, furniture production, businesses directly and indirectly related to the Marcellus Shale gas drilling industry, transportation and construction equipment sales and service, Lock Haven University and state governmental agencies.

Clinton County, Pa. is fortunate to be home to an abundance of outdoor recreational opportunities. The county is known as the “Gateway to the Pennsylvania Wilds” because it is home to thousands of miles of state forests, state parks, state games lands, fishing destinations and the west branch of the Susquehanna River. Seventy percent of the streams and rivers in the county are already stringently protected under Pennsylvania’s Clean Streams Law (Pa. Act 394 of 1937) and other state-specific water quality statutes. The state of Pennsylvania and its localities have a long history of protecting local water resources.

Many of the projects our state and localities are working on—and many other county projects across the nation—would be significantly affected by the changes to the definition of “waters of the U.S.” that have been proposed by the U.S. Environmental Protection Agency (EPA) and the U.S. Army Corps of Engineers (Corps). **Therefore, we have urged the agencies to withdraw the proposed rule until further analysis of its potential impacts has been completed.** In fact, many prominent national associations of regional and local officials have expressed similar concerns, including the County Commissioners Association of Pennsylvania, U.S. Conference of Mayors, National League of Cities, National Association of Regional Councils, National Association of County Engineers, American Public Works Association and the National Association of Flood and Stormwater Management Agencies.

Today, I will discuss potential on-the-ground impacts of this proposed rule on my county and on counties nationwide.

1. The “Waters of the U.S.” Proposed Rule Matters to Counties—*Clean water is essential for public health and safety, and state and local governments play a significant role in ensuring that local water resources are protected. This issue is so important to counties because not only do we build, own and maintain a significant portion of public safety infrastructure, we are also mandated by law to work with federal and state governments to implement Clean Water Act (CWA) programs.*

2. The Consultation Process with State and Local Governments was Flawed—*Counties are not just another stakeholder group in this discussion—we are a key partner in our nation’s intergovernmental system. Because counties work with both federal and state governments to implement Clean Water Act (CWA) programs, it is important that all levels of government work together to form practical and workable rules and regulations that achieve the shared goals of protecting clean water, ensuring the safety of our communities and minimizing unnecessary delays and costs.*

3. Counties Have Significant Concerns with the Proposed Rule; A One-Size-Fits-All Federal Regulation is Not the Answer

—For over a decade, counties have been voicing concerns on the existing “waters of the U.S.” definition, as there has been much confusion regarding this definition, even after several Supreme Court cases. While we agree that there needs to be a clear, workable definition of “waters of the U.S.,” we do not believe that the new proposed definition provides the certainty and clarity needed for operations at the local level. After consulting extensively with county technical experts—including county engineers, attorneys, stormwater managers and other county authorities—on the proposed rule’s impact on daily operations and local budgets, our key concerns include undefined and confusing definitions and potential for sweeping impacts across all Clean Water Act programs.

4. The Current Process Already Presents Significant Challenges for Counties; the Proposed Rule Only Complicates Matters

—Under federal law, as it pertains to the Clean Water Act, counties serve as both the regulator and regulated entity and are responsible for ensuring that clean water goals are achieved and that our constituents are protected. However, the current system already presents major challenges—including getting permits approved by the agencies in a timely manner, juggling multiple and often duplicative state and federal requirements, and anticipating and paying for associated costs. The proposed rule, as currently written, only adds to the confusion and uncertainty over how it would be implemented consistently across all regions.

1. The “Waters of the U.S.” Proposed Rule Matters to Counties

First, clean water is essential to all of our nation’s counties, who play vital roles in protecting our citizens by preserving local resources and maintaining public safety. The availability of an adequate supply of clean water is vital to our nation and integrated and cooperative programs at all levels of government are necessary for protecting water quality.

Counties support clean water and play a key role in protecting the environment. We pass zoning and other land use ordinances to safeguard valuable natural resources and protect our local communities depending on state law and local responsibility. Counties provide extensive outreach and education to residents on water quality and stormwater impacts. We also establish rules on illicit discharges and fertilizer ordinances, remove septic tanks, work to reduce water pollution, adopt setbacks for land use plans, and are responsible for water recharge areas, green infrastructure and water conservation programs.

Counties must also plan for the unexpected and remain flexible to address regional conditions that may impact the safety and well-being of our citizens. Specific regional differences, including condition of watersheds, water availability, climate, topography and geology are all factored in when counties implement public safety and common-sense water quality programs.

For example, some counties in low-lying areas have consistently high groundwater tables and must carefully maintain drainage conveyances to both prevent flooding and reduce breeding grounds for disease-causing mosquitoes. On the other hand, counties in the arid west are facing extreme drought conditions in which the availability of water has become scarce. In these regions, counties are using infrastructure to preserve water for future use.

In my state of Pennsylvania, conservation districts are authorized to make critical front-line decisions relating to many aspects of waterway planning and management, including storm water management, flood mitigation and maintenance of dams and levees (Pa. Act 217 of 1945, Section 2). While the Clinton County Conservation District is an independent entity, the county funds 40 percent of its annual budget and the district oversees the state’s stormwater management permitting program, dirt and gravel road pollution prevention, programs to ensure water quality and protect the public from flooding.

Second, counties have much at stake in this discussion as we are major owners of public infrastructure, including 45 percent of America’s road miles, nearly 40 percent of bridges, 960 hospitals, more than 2,500 jails, 650 nursing homes and a third of the nation’s airports. Counties also own and maintain a wide variety of public safety infrastructure that would be impacted by the proposed rule, including roadside ditches, flood control channels, stormwater culverts and pipes, Municipal Separate Storm Sewer Systems (MS4), and other infrastructure used to funnel water away from low-lying roads, properties and businesses. These not only protect our water quality, but prevent accidents and flooding. Defining what waters and their conveyances fall under federal jurisdiction has a direct impact on counties who are legally responsible for maintaining public safety ditches and other infrastructure.

In Pennsylvania, counties own more than 4,000 bridges. One rural Pennsylvania county had a significant issue with debris piling up against a railroad bridge, creating a flooding hazard, the county had to act quickly to protect public safety. However, due to the complicated permitting and planning aspects of the federal Section 404 permit process, the estimated costs for the project soared to over \$100,000, which was cost prohibitive for the county. Instead, the county worked with the state to craft a limited work plan that reduced flooding, but did not eliminate the problem, and kept costs to \$10,000.

Counties are also the first line of defense in any disaster, particularly as it relates to public infrastructure. Following a major disaster, county local police, sheriffs, firefighters and emergency personnel are the first on the scene. In the aftermath, counties focus on clean-up, recovery and rebuilding. In 2004, after the remnants of Hurricane Ivan roared through the county and flooded nearly 1,000 homes and businesses, local governments moved quickly to work with the state and multiple federal agencies to rebuild critical infrastructure.

This is neither a partisan nor a political issue for counties. It is a practical issue and our position has been guided by county experts—county engineers, attorneys and stormwater practitioners—who are on the ground working every day to implement federal and state mandated rules and policies. NACo’s position on the proposed rule has been approved and supported by urban, suburban and rural county elected officials and our association’s policy is based on the real world experiences of county governments within the current Clean Water Act (CWA) permitting process.

2. The Consultation Process with State and Local Governments was Flawed

Counties are not just another stakeholder group in this discussion—we are a key part of the federal-state-local partnership. Because counties work with both federal and state governments to implement Clean Water Act (CWA) programs, it is important that all levels of government work together to form practical and workable rules and regulations that achieve the shared goals of protecting clean water, ensuring the safety of our communities and minimizing unnecessary delays and costs.

Throughout the entire rule-making process, state and local governments were not adequately consulted through the Regulatory Flexibility Act (RFA) and Executive Order 13132: Federalism (EO 13132). Since 2011, NACo has repeatedly requested a transparent process, as directed under the Administrative Procedures Act (APA), which calls for meaningful consultation with impacted state and local governments.

Under RFA and EO 13132, federal agencies are required to work with impacted state and local governments on proposed regulations that will have a substantial direct effect on them. We believe the “waters of the U.S.” proposed rule triggers federal consultation requirements with state and local governments.

As part of the RFA process, the agencies must “certify” that the proposed rule does not have a Significant Economic Impact on a Substantial Number of Small Entities (SISNOSE). Small entities are defined as small businesses and organizations, cities, counties, school districts and special districts with a population below 50,000. To certify a proposed rule, federal agencies must provide a “factual basis” to determine that a rule does not impact small entities. This means “at minimum...a description of the number of affected entities and the size of the economic impacts and why either the number of entities or the size of the impacts justifies the certification.”

The RFA SISNOSE process allows federal agencies to identify areas where the proposed rule may economically impact a significant number of small entities and consider regulatory alternatives that will lessen the burden on these entities. If the agencies are unable to certify that a proposed rule does not impact small entities, the agencies are required to convene a small business advocacy review (SBAR) panel. **The agencies determined, incorrectly, that there was “no SISNOSE”—and therefore did not provide the necessary review.**

In a letter sent to EPA Administrator Gina McCarthy and Corps Deputy Commanding General for Civil and Emergency Operations Major General John Peabody, Small Business Administration’s Office of Advocacy (Advocacy) expressed significant concerns that the proposed “waters of the U.S.” rule was “improperly certified...used an incorrect baseline for determining...obligations under the RFA...imposes costs directly on small businesses” and “will have a significant economic impact...” Advocacy requested that the agencies “withdraw the rule” and that the EPA “conduct a Small Business Advocacy Review panel before proceeding any further with this rulemaking.” **Since over 2,000 of our nation’s counties are considered rural and covered under SBA’s responsibility, NACo supports the SBA Office of Advocacy’s conclusions.**

Within the proposed rule, the agencies indicated that they “voluntarily undertook federalism consultation.” While we appreciate the agencies’ outreach efforts, we believe that EPA prematurely truncated the Federalism consultation process. In 2011, EPA initiated a formal Federalism consultation process but in the 17 months between the consultation and the proposed rule’s publication, the agency failed to avail itself of the opportunity to continue meaningful discussions during this intervening period, thereby failing to fulfill the intent of Executive Order 13132 and the agency’s internal process for implementing it.

Further, because a thorough consultation process was not followed, the agencies released an incomplete and inaccurate economic analysis that did not fully capture the potential impact on other Clean Water Act programs. Further, the agencies used permit applications from 2009-2010 as a baseline to estimate the costs when there was more current data available. NACo has repeatedly raised concerns about the potential costs and the data points used in the cost-benefit analysis—these concerns have yet to be addressed.

3. Counties Have Significant Concerns with the Proposed Rule: A One-Size-Fits-All Federal Regulation is not the Answer

For over a decade, counties have been voicing concerns regarding the existing “waters of the U.S.” definition, as there has been much confusion regarding this definition even after several Supreme Court decisions on this issue. While we agree that there needs to be a clear, workable definition of “waters of the U.S.,” we do not believe that the new proposed definition provides the certainty and clarity needed for operations at the local level.

After consulting extensively with county technical experts—including county engineers, attorneys, stormwater managers and other county authorities—on the proposed rule’s impact on daily operations and local budgets, we are very concerned about:

- *undefined and confusing definitions*
- *cascading negative impacts across all Clean Water Act programs*

First, specific definitions within the proposed rule are undefined and unclear, this lack of clarity could be used to claim federal jurisdiction more broadly. The proposed rule extends the “waters of the U.S.” definition by utilizing new terms—“tributary,” “uplands,” “significant nexus,” “adjacency,” “riparian areas,” “floodplains” and “neighboring”—that could increase the types of public infrastructure considered jurisdictional under the CWA. For counties that own and manage public safety infrastructure, the potential implication is that public safety ditches will be treated the same as rivers and streams, while the functions and purposes of both are significantly different.

NACo has worked with the agencies to clarify these key terms and their intent, but has received little assurance about how each region will interpret and implement the new definition. In fact, the agencies have delivered inconsistent information about which waters would or would not be covered under federal jurisdiction.

Second, the proposed rule could have a cascading impact on all CWA programs, not just the Section 404 program. This means that changing the definitions within the proposed rule could have far-reaching impacts on even more local stormwater programs and county owned infrastructure. NACo has asked for clarification from the agencies and has yet to receive a direct answer on the potential reach and implications of a new definition on “waters of the U.S.”

4. The Current Clean Water Act Section 404 Permit Process Already Presents Significant Challenges for Counties; the New Proposed Rule Only Complicates Matters

Under federal law, as it pertains to the Clean Water Act, counties serve as both the regulator and regulated entity and are responsible for ensuring that clean water goals are achieved and that their constituents are protected. In practical terms, many counties implement and enforce Clean Water Act programs, and also must meet Clean Water Act requirements themselves.

However, the current system already presents major challenges—including the existing permitting process, multiple and often duplicative state and federal requirements, and unanticipated project delays and costs. The proposed rule, as currently written, only adds to this confusion and complicates already inconsistent definitions used in the field by local agencies in different jurisdictions across the country.

Ditches are pervasive in counties across the nation; until recently, they were not required to have federal CWA Section 404 permits. However, in recent years, some Corps districts have inconsistently required counties to have federal permits for construction and maintenance activities on our public safety ditches. It is critical for counties to have clarity, consistency and certainty on the types of public safety infrastructure that require federal permits.

Next, the current process is already complex, time-consuming and expensive, leaving local governments and public agencies vulnerable to citizen suits. Counties across the nation have experienced delays and frustrations with the current Section 404 permitting process. If a project is deemed to be under federal jurisdiction, other federal requirements are triggered, such as environmental impact statements, the National Environmental Policy Act (NEPA) process and Endangered Species Act (ESA) implications. These assessments often involve intensive studies and public comment periods, which can delay critical public safety upgrades to county owned infrastructure and add to the overall time and cost of projects.

One Midwest county had five road projects that were significantly delayed by the federal permitting process for over two years. After studying the projects, the county determined that the delays and extra requirements added approximately \$500,000 to the cost of completing these projects. Some northern counties have even missed entire construction seasons as they waited for federal permits.

Under the current federal program, counties can utilize a maintenance exemption to move ahead with necessary upkeep of ditches (removing vegetation, extra dirt and debris)—however, the approval of such exemptions is sometimes applied inconsistently, not only nationally but within regions. These permits come with strict special conditions that dictate when and how counties can remove grass, trees and other debris that cause flooding if they are not removed from the ditches.

For example, one California county was told that they had to obtain a maintenance permit to clean out an earthen stormwater ditch. Because the ditch is now under federal jurisdiction, the county is only permitted to clear overgrowth and trash from the ditch six months out of the year due to potential ESA impacts. Since the county is not allowed to service the ditch regularly, it has flooded private property several times and negatively impacted the surrounding community.

Another county in Florida applied for 18 specific maintenance exemptions on the county's network of drainage ditches and canals. The federal permitting process became so challenging that the county ended up having to hire a consultant to compile all of the data and surveying materials that were required for the exemptions. Three months later and at a cost of \$600,000, the county was still waiting for 16 of the exemptions to be determined. At that point, the county was moving into its seasonal rainy season and had to deal with calls from residents as ditches that did not have a decision from the Corps were flooding.

As a former PENNDOT employee that managed Clinton County, Pa.'s extensive highway system, I have experienced how excessive and unclear regulations can jeopardize road maintenance projects. I have seen many road construction projects take more than a year to get through the federal permitting process under current regulations. The more time-consuming and difficult the federal permitting process, the higher the engineering costs for local governments, businesses and economies.

Additionally, counties are liable for ensuring that our public safety ditches are maintained and in some cases counties have faced lawsuits over ditch maintenance. In 2002, in *Arreola v Monterey* (99 Cal. App. 4th 722), the Fourth District Court of Appeals held the County of Monterey (Calif.) liable for not maintaining a flood control channel that failed due to overgrowth of vegetation.

Counties are also facing high levels of litigation from outside groups on approved permits that have been signed off by both the state and the EPA. Even though the counties are following the state and federal permitting rules on water quality, these groups are asserting that the permits are not stringent enough. A number of counties in Washington and Maryland have been sued over the scope and sufficiency of their approved MS4 permits.

These are just a few examples of the real impact of the current federal permitting process. The new proposed rule creates even more confusion over what is under federal jurisdiction. If the approval process is not clarified and streamlined, more counties will experience delays in safeguarding and caring for these public safety and stormwater ditches.

CONCLUSION

Chairman Thompson, Ranking Member Grisham and members of the Subcommittee, the health, well-being and safety of our residents is a top priority for counties. Our bottom line is that the proposed rule contains many terms that are not adequately defined, and NACo believes that more roadside ditches,

flood control channels and stormwater management conveyances and treatment approaches will be federally regulated under this proposal.

This is problematic because our members are ultimately liable for maintaining the integrity of these ditches, channels, conveyances and treatment approaches, even if federal permits are not issued by the federal agencies in a timely manner. Furthermore, the unknown impacts on other CWA programs are equally problematic.

We ask that the proposed rule be withdrawn until further analysis has been completed and more in-depth consultation with state and local officials—especially practitioners—is undertaken.

NACo and counties nationwide share the goal for a clear, concise and workable definition of “waters of the U.S.” to reduce confusion—not to mention costs—within the federal permitting process. Unfortunately, we believe that this proposed rule falls short of that goal.

Counties stand ready to work with Congress and the agencies to craft a clear, concise and workable definition of “waters of the U.S.” to reduce confusion within the federal CWA program. We look forward to working together with our federal partners, as our founding fathers intended, to protect our nation’s water resources for generations to come. We can achieve our shared goal of protecting the environment without inhibiting public safety and economic vitality of our communities.

Thank you again for the opportunity to testify today on behalf of America’s 3,069 counties. I would welcome the opportunity to address any questions.

Re: Definition of “Waters of the United States” Under the Clean Water Act, Docket ID No. EPA-HQ-OW-2011-0880

Dear Ms. Downing and Ms. Jensen:

On behalf of the National Association of Counties (NACo) and the 3,069 counties we represent, we respectfully submit comments on the U.S. Environmental Protection Agency’s (EPA) and the U.S. Army Corps of Engineers (Corps) jointly proposed rule on *Definition of “Waters of the United States” Under the Clean Water Act*.¹ We thank the agencies for their ongoing efforts to communicate with NACo and our members throughout this process. **We remain very concerned about the potential impacts of the proposed rule and urge the agencies to withdraw it until further analysis has been completed.**

Founded in 1935, NACo is the only national organization that represents county governments in the United States and assists them in pursuing excellence in public service to produce healthy, vibrant, safe and resilient counties.

The Importance of Clean Water and Public Safety

Clean water is essential to all of our nation’s counties who are on the front lines of protecting the citizens we serve through both preserving local resources and maintaining public safety. The availability of an adequate supply of clean water is vital to our nation and integrated and cooperative programs at all levels of government are necessary for protecting water quality.

Counties are not just another stakeholder group in this discussion—they are a valuable partner with federal and state governments on Clean Water Act implementation. To that end, it is important that the federal, state and local governments work together to craft practical and workable rules and regulations.

Counties are also responsible to protect the public. Across the country, counties own and maintain public safety ditches including road and roadside ditches, flood control channels, stormwater culverts and pipes, and other infrastructure that is used to funnel water away from low-lying roads, properties and businesses to prevent accidents and flooding incidents. **Defining what waters and their conveyances fall under federal jurisdiction has a direct impact on counties who are legally responsible for maintaining their public safety ditches and infrastructure.**

¹ Definition of Waters of the U.S. Under the Clean Water Act, 79 Fed. Reg. 22188 (April 21, 2014).

NACo shares the EPA's and Corps goal for a clear, concise and workable definition for "waters of the U.S." to reduce confusion—not to mention costs—within the federal permitting process. Unfortunately, we believe that this proposed rule falls short of that goal.

EPA asserts that they are not trying to regulate any waters not historically or previously regulated. But this is misleading. Prior to a 2001 Supreme Court decision,² virtually all water was jurisdictional. The EPA's and the Corps economic analysis agrees. It states that "Just over 10 years ago, almost all waters were considered "waters of the U.S."³ This is why we believe the proposed rule is an expansion of jurisdiction over current regulatory practices.

Hundreds of counties, including their respective state associations of counties, have submitted public comments on the proposed rule over concerns about how it will impact daily operations and local budgets. We respectfully urge the agencies to examine and consider these comments carefully.

This letter will highlight a number of areas important to counties as they relate to the proposed rule:

- **Counties Have a Vested Interest in the Proposed Rule**
- **The Consultation Process with State and Local Governments was Flawed**
- **Incomplete Data was Used in the Agencies' Economic Analysis**
- **A Final Connectivity Report is Necessary to Justify the Proposed Rule**
- **The Clean Water Act and Supreme Court Rulings on "Waters of the U.S."**
- **Potential Negative Effects on All CWA programs**
- **Key Definitions are Undefined**
- **The Section 404 Permit Program is Time-Consuming and Expensive for Counties**
- **County Experiences with the Section 404 Permit Process**
- **Based on Current Practices—How the Exemption Provisions May Impact Counties**
- **Counties Need Clarity on Stormwater Management and Green Infrastructure Programs**
- **States Responsibilities Under CWA Will Increase**
- **County Infrastructure on Tribal Land May Be Jurisdictional**
- **Endangered Species Act as it Relates to the Proposed Rule**
- **Ensuring that Local Governments Are Able to Quickly Recover from Disasters**

Counties Have a Vested Interest in the Proposed Rule

In the U.S., there are 3,069 counties nationally which vary in size and population. They range in area from 26 square miles (Arlington County, Virginia) to 87,860 square miles (North Slope Borough, Alaska). The population of counties varies from Loving County, Texas, with just under 100 residents to Los Angeles County, California, which is home to close to ten million people. Forty-eight of the 50 states have operational county governments (except Connecticut and Rhode Island). Alaska calls its counties boroughs and Louisiana calls them parishes.

Since counties are an extension of state government, many of their duties are mandated by the state. Although county responsibilities differ widely between states, most states give their counties significant authorities. These authorities include construction and maintenance of roads, bridges and other infrastructure, assessment of property taxes, record keeping, running elections, overseeing jails and court

systems and county hospitals. Counties are also responsible for child welfare, consumer protection, economic development, employment/training, and land use planning/zoning and water quality.

Counties own and maintain a wide variety of public safety infrastructure that would be impacted by the proposed rule including roads and roadside ditches, stormwater municipal separate storm sewer systems (MS4), green infrastructure construction and maintenance projects, drinking water facilities and infrastructure (not designed to meet CWA requirements) and water reuse and infrastructure.

On roads and roadside ditches, counties are responsible for building and maintaining 45 percent of public roads in 43 states (Delaware, North Carolina, New Hampshire, Vermont and West Virginia counties do not have road responsibilities). These responsibilities can range from intermittent maintenance, such as snow plowing, debris cleanup, short term paving and surface repairs to maintenance of traffic safety and road signage and major long-term construction projects.

Many of these road systems are in very rural areas. Of the nation's 3,069 counties, approximately 70 percent of our counties are considered "rural" with populations less than 50,000 and 50 percent of these are counties have populations below 25,000 residents. Any additional cost burdens are challenging to these smaller governments, especially since more rural counties have the most road miles and corresponding ditches. Since state constitutions and statutes dictate and limit the revenue sources counties may use, balancing increased federal and state regulations with the limited financial resources available to local governments poses significant implementation challenges.

Changes to the scope of the "waters of the U.S." definition, without a true understanding of the direct and indirect impact and costs to state and local governments, puts our local governments in a precarious position, choosing between environmental protection and public safety. Counties do not believe this needs to be an either/or decision if local governments are involved in policy formations from the start.

Regardless of size, counties nationwide are coping with fiscally tight budgets. County revenues have declined and ways to effectively increase county treasuries are limited. In 2007, our counties were impacted by the national financial crisis, which pushed the nation into a recession. The recession affected the capacity of county governments to deliver services to their communities. While a number of our counties are experiencing moderate growth, in some parts of the country, economic recovery is still fragile.⁴ This is why we are concerned about the proposed rule.

The Consultation Process with State and Local Governments was Flawed

Throughout the entire rule-making process, state and local governments were not adequately consulted through the Regulatory Flexibility Act (RFA) and Executive Order 13132: Federalism. Since 2011, NACo has repeatedly requested a transparent process, as directed under the Administrative Procedures Act (APA), which includes meaningful consultation with impacted state and local governments.

The Regulatory Flexibility Act (RFA) as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA), requires federal agencies to consider potential impacts of proposed rules on small entities. This process was not followed for the proposed "waters of the U.S." rule.

Under RFA, small entities are defined as small businesses and organizations, cities, counties, school districts and special districts with a population below 50,000. RFA requires agencies to analyze the impact any proposed rule

⁴ Nat'l Ass'n of Counties, *County Tracker 2013: On the Path to Recovery*, NACo Trends Analysis Paper Series, (2014).

could have on small entities and provide less costly options for implementation. The Small Business Administration's (SBA) Office of Advocacy (Advocacy) oversees federal agency compliance with RFA.

As part of the rulemaking process, the agencies must "certify" the proposed rule does not have a Significant Economic Impact on a Substantial Number of Small Entities (SISNOSE). To certify a proposed rule, federal agencies must provide a "factual basis" to certify that a rule does not impact small entities. This means "at minimum...a description of the number of affected entities and the size of the economic impacts and why either the number of entities or the size of the impacts justifies the certification."⁵

The RFA SISNOSE process allows federal agencies to identify areas where the proposed rule may economically impact a significant number of small entities and consider regulatory alternatives that will lessen the burden on these entities. If the agencies are unable to certify that a proposed rule does not impact small entities, the agencies are required to convene a small business advocacy review (SBAR) panel. **The agencies determined, incorrectly, there was "no SISNOSE"—and therefore did not provide a necessary review.**

In a letter sent to EPA Administrator Gina McCarthy and Corps Deputy Commanding General for Civil and Emergency Operations Major General John Peabody, SBA Advocacy expressed significant concerns that the proposed "waters of the U.S." rule was "improperly certified...used an incorrect baseline for determining...obligations under the RFA...imposes costs directly on small businesses" and "will have a significant economic impact..." Advocacy requested that the agencies "withdraw the rule" and that the EPA "conduct a Small Business Advocacy Review panel before proceeding any further with this rulemaking."⁶ **Since over 2,000 of our nation's counties are considered rural and covered under SBA's responsibility, NACo supports the SBA Office of Advocacy conclusions.**

President Clinton issued Executive Order No. 13132, "Federalism," on August 4, 1999. **Under Executive Order 13132—Federalism, federal agencies are required to work with state and local governments on proposed regulations that will have a substantial direct impact on state and local governments.** We believe the proposed "waters of the U.S." rule triggers Executive Order 13132. Under Federalism, agencies must consult with state and local officials early in the process and must include in the final draft regulation a federalism summary impact statement, which must include a detailed overview of state and local government concerns and describe the extent the agencies were able to address the concerns.⁷ **A federalism impact statement was not included with the proposed rule.**

EPA's own internal guidance summarizes when a Federalism consultation should be initiated.⁸ Federalism may be triggered if a proposed rule has an annual implementation cost of \$25 million for state and local governments.⁹ Additionally, if a proposal triggers Federalism, EPA is required to work with state and local governments in a "meaningful and timely" manner which means "consultation should begin as early as possible and continue as you develop the proposed rule."¹⁰ Even if the rule is determined not to impact state

⁹ *Id.* at 6.

¹⁰ *Id.* at 9.

and local governments, the EPA still subject to its consultation requirements if the proposal has "any adverse impact above a minimum level."¹¹

Within the proposed rule, the agencies have indicated they "voluntarily undertook federalism consultation."¹² While we are heartened by the agencies' acknowledgement of our concerns, we are disturbed that EPA prematurely truncated the state and local government Federalism consultation process. **EPA initiated a formal Federalism consultation process in 2011. In the 17 months between the consultation and the proposed rule's publication, EPA failed to avail itself of the opportunity to continue substantial discussions during this intervening period with its intergovernmental partners, thereby failing to fulfill the intent of Executive Order 13132, and the agency's internal process for implementing it.**

Recommendations:

1. Pursuant to the rationale provided herein, as well as that put forth by the SBA Chief Counsel for Advocacy, formally acknowledge that this regulation does not merit a "no SISNOSE" determination and, thereby, must initiate the full small entity stakeholder involvement process as described by RFA SBREFA
2. Convene a SBAR panel which provides an opportunity for small entities to provide advice and recommendations to ensure the agencies carefully considers small entity concerns
3. Complete a multiphase, rather than one-time, Federalism consultation process
4. Charter an ad hoc, subject-specific advisory committee under the authority of the Federal Advisory Committee Act (FACA), as EPA has done on numerous occasions for less impactful regulations, to underpin the development of this comprehensive regulation
5. **Accept an ADR Negotiated Rulemaking process for the proposed rule:** Because of the intrinsic problems with the development of the proposed rule, we would also ask the agencies to consider an Alternative Dispute Resolution (ADR) negotiated rulemaking with all stakeholders. An ADR negotiated rulemaking process would allow stakeholders of various groups to "negotiate" the text of a proposed rule, to allow problems to be addressed and consensus to be reached.

Incomplete Data was Used in the Agencies' Economic Analysis

As part of the proposed rule, the agencies released their cost-benefit analysis on *Economic Analysis of Proposed Revised Definition of Waters of the U.S.* (March 2014). We are concerned about the limited scope of this analysis since it bases its assumptions on a narrow set of CWA data not applicable to other CWA programs. Since EPA has held its 2011 Federalism briefing on "waters of the U.S.," **we have repeatedly raised concerns about the potential costs and the data points used in the cost-benefit analysis—these concerns have yet to be addressed.**^{13 14 15}

¹⁴ Letter from Larry Naake, Exec. Dir., Nat'l Ass'n of Counties to Lisa Jackson, Adm'r, EPA, Federalism Consultation Exec..Order 13132: "Waters of the U.S." Definitional Change (Dec. 15, 2011) available at http://www.naco.org/legislation/policies/Documents/Energy.Environment.Land%20Use/Waters%20US%20Draft%20guidance%20NACo%20Comments%20Dec%2015%202011_final.pdf.

The economic analysis uses CWA Section 404 permit applications from 2009-2010 as its baseline data to estimate the costs to all CWA programs. There are several problems with this approach. Based on this data, the agencies expect an increase of approximately three percent of new waters to be jurisdictional within the Section 404 permit program. The CWA Section 404 program administers permits for the "discharge of dredge and fill material" into "waters of the U.S." and is managed by the Corps.

First, we are puzzled why the agencies chose the span of 2009-2010 as a benchmark year for the data set as more current up-to-date data was available. In 2008, the nation entered a significant financial recession, sparked by the housing subprime mortgage crisis. Housing and public infrastructure construction projects were at an all-time low. According to the National Bureau of Economic Research, the recession ended in June 2009,¹⁶ however, the nation is only starting to show signs of recovery.¹⁷ By using 2009-2010 data, the agencies have underestimated the number of new waters that may be jurisdictional under the proposed rule.

Second, the economic analysis uses the 2009-2010 Corps Section 404 data as a baseline to determine costs for other CWA programs run by the EPA. Since there is only one "waters of the U.S." definition used within the CWA, the proposed rule is applicable to all CWA programs. The Congressional Research Service (CRS), a public policy research arm of the U.S. Congress, released a report on the proposed rule that stated "costs to regulated entities and governments (federal, state, and local) are likely to increase as a result of the proposal." The report reiterates there would be "additional permit application expenses (for CWA Section 404 permitting, stormwater permitting for construction and development activities, and permitting of pesticide discharges...for discharges to waters that would now be determined jurisdictional)."¹⁸

We are concerned the economic analysis focuses primarily on the potential impacts to CWA's Section 404 permit program and does not fully address the cost implications for other CWA programs. The EPA's and the Corps economic analysis agrees, "...the resulting cost and benefit estimates are incomplete...Readers should be cautious in examining these results in light of the many data and methodological limitations, as well as the inherent assumptions in each component of the analysis."¹⁹

Recommendation:

- **NACo urges the agencies to undertake a more detailed and comprehensive analysis on how the definitional changes will directly and indirectly impact all Clean Water Act programs, beyond Section 404, for federal, state and local governments**
- **Work with national, state and local stakeholder groups to compile up-to-date cost and benefit data for all CWA programs**

A Final Connectivity Report is Necessary to Justify the Proposed Rule

In addition to the aforementioned issues, we are also concerned that the draft science report, *Connectivity of Streams and Wetlands to Downstream Waters: A Review and Synthesis of the Scientific Evidence*, used as a scientific basis of the proposed rule, is still in draft form.

In 2013, EPA asked its' Science Advisory Board (SAB), which is comprised of 52 scientific advisors, to review the science behind the report. The report focused on more than 1,000 scientific studies and reports on the interconnectivity of water. In mid-October, 2014, the SAB completed its review of the draft report and sent its recommendations to the EPA.²⁰

The SAB recommendations have yet to be incorporated into the draft connectivity report. Releasing the proposed rule before the connectivity report is finalized is premature—the agencies missed a valuable opportunity to review comments or concerns raised in the final connectivity report that would inform development of the proposed "waters of the U.S." rule.

Recommendations:

- **Reopen the public comment period on the proposed "waters of the U.S." rule when the *Connectivity of Streams and Wetlands to Downstream Waters: A Review and Synthesis of the Scientific Evidence* report is finalized**

The Clean Water Act and Supreme Court Rulings on "Waters of the U.S."

Clean water is essential for public health and state and local governments play a large role in ensuring local water resources are protected. It is important state and local governments are involved as a significant partner in the CWA rule development process.

The Clean Water Act charges the federal government with setting national standards for water quality. Under a federal agreement for CWA enforcement, the EPA and the Corps share clean water responsibilities. The Corps is the lead on the CWA Section 404 Dredge and Fill permit program and the EPA is the lead on other CWA programs.²¹ 46 states have undertaken authority for EPA's Section 402 NPDES permit program—EPA manages NPDES permits for Idaho, Massachusetts, New Hampshire and New Mexico.²² Additionally, all states are responsible for setting water quality standards to protect "waters of the U.S."²³

"Waters of the U.S." is a term used in CWA—it is the glue that holds the Clean Water Act together. The term is derived from a law that was passed in 1899, the Rivers and Harbors Act, that had to do with interstate commerce—any ship involved in interstate commerce on a "navigable water," which, at the time, was a lake, river, ocean—was required to have a license for trading.

²² Cong. Research Service, Clean Water Act: A Summary of the Law (Report RL 30030, October 30, 2014), Copeland, Claudia, at 4.

²³ *Id.*

The 1972 Clean Water Act first linked the term “navigable waters” with “waters of the U.S.” in order to define the scope of the CWA. The premise of the 1972 CWA was that all pollutants discharged to a navigable water of the U.S. were prohibited, unless authorized by permit.

In the realm of the CWA’s Section 404 permit program, the courts have generally said that “navigable waters” goes beyond traditionally navigable-in-fact waters. However, the courts also acknowledge there is a limit to jurisdiction. What that limit is within Section 404 has yet to be determined and is constantly being litigated.

In 2001, in *Solid Waste Agency of Northern Cook County (SWANCC) v. United States Army Corps of Engineers*, the Corps had used the “Migratory Bird Rule”—wherever a migratory bird could land—to claim federal jurisdiction over an isolated wetland.²⁴ In SWANCC, Court ruled that the Corps exceeded their authority and infringed on states’ water and land rights.²⁵

In 2006, in *Rapanos v. United States*, the Corps were challenged over their intent to regulate isolated wetlands under the CWA Section 404 permit program.²⁶ In a 4-1-4 split decision, the Court ruled that the Corps exceeded their authority to regulate these isolated wetlands. The plurality opinion states that only waters with a relatively permanent flow should be federally regulated. The concurrent opinion stated that waters should be jurisdictional if the water has a “significant nexus” with a navigable water, either alone or with other similarly situated sites.²⁷ Since neither opinion was a majority opinion, it is unclear which opinion should be used in the field to assert jurisdiction, leading to further confusion over what waters are federally regulated under CWA.

Potential Negative Effects on All CWA Programs

There is only one definition of “waters of the U.S.” within the CWA which must be applied consistently for all CWA programs that use the term “waters of the U.S.” While Congress defined “navigable waters” in CWA section 502(7) to mean “the waters of the United States, including the territorial seas,” the Courts have generally assumed that “navigable waters of the U.S.” go beyond traditional navigable-in-fact waters such as rivers. However, the Courts also acknowledge there is a limit to federal jurisdiction.

Previous Corps guidance documents on “waters of the U.S.” clarifications have been strictly limited to the Section 404 permit program. A change to the “waters of the U.S.” definition though, has implications for ALL CWA programs. This modification goes well beyond solely addressing the problems within the Section 404 permit program. These effects have not been fully studied nor analyzed.

Changes to the “waters of the U.S.” definition within the CWA will have far-reaching effects and unintended consequences to a number of state and local CWA programs. As stated before, the proposed economic analysis needs to be further fleshed out to recognize all waters that will be jurisdictional, beyond the current data of Section 404 permit applications. CWA programs, such as the National Pollutant Discharge Elimination System (NPDES), total maximum daily load (TMDL) and other water quality standards programs, state water quality certification process, or Spill Prevention, Control and Countermeasure (SPCC) programs, will be impacted.

²⁷ *Id.*

Key Definitions are Undefined

The proposed rule extends the "waters of the U.S." definition by utilizing new terms—"tributary," "uplands," "significant nexus," "adjacency," "riparian areas," "floodplains" and "neighboring"—that will be used to claim jurisdiction more broadly. All of these terms will broaden the types of public infrastructure that is considered jurisdictional under the CWA.

"Tributary"—The proposed rule states that a tributary is defined as a water feature with a bed, bank, ordinary high water mark (OHWM), which contributes flow, directly or indirectly, to a "water of the U.S." A tributary does not lose its status if there are man-made breaks (bridges, culverts, pipes or dams) or natural breaks upstream of the break. The proposed rule goes on to state that **"A tributary...includes rivers, streams, lakes, ponds, impoundments, canals, and ditches..."**²⁸

For counties that own and manage public safety infrastructure, the potential implication is that roadside ditches will be treated the same as rivers and streams, while the functions and purposes of both are significantly different. Public safety ditches should not be classified as tributaries. Further fleshing out the exemptions for certain types of ditches, which is discussed later in the letter, would be beneficial.

"Uplands"—The proposed rule recommends that "Ditches that are excavated wholly in uplands, drain only uplands, and have less than perennial flow" are exempt, however, the term "uplands" is undefined.²⁹ This is problematic. County public safety ditch systems—roadside, flood, drainage, stormwater—can be complex. While they are generally dug in dry areas, they run through a transitional area before eventually connecting to "waters of the U.S." It is important to define the term "uplands" to ensure the exemption is workable.

"Significant Nexus"—The proposed rule states that "a particular category of waters either alone or in combination with similarly situated waters in the region, significantly affect the chemical, physical, or biological integrity of traditional navigable or interstate waters."³⁰

This definition uses the watershed approach to determine jurisdiction—a watershed is an area of land where all of the rivers, streams, and other water features drain to the same place. According to the EPA, "Watersheds come in all shapes and sizes. They cross county, state, and national boundaries. In the continental U.S., there are 2,110 watersheds, including Hawaii, Alaska, and Puerto Rico, there are 2,267 watersheds."³¹

There are very few parts of the country that are not in a watershed. This definition would create burdens on local governments who maintain public safety ditches and infrastructure near natural waterbodies; this infrastructure could be considered jurisdictional under the "significant nexus" definition.

"Adjacent Waters"— Under current regulation, only those wetlands that are adjacent to a "waters of the U.S." are considered jurisdictional. However, the proposed regulate broadens the regulatory reach to "adjacent waters," rather than just to "adjacent wetlands." This would extend jurisdiction to "all waters," not just "adjacent wetlands." The proposed rule defines "adjacent as "bordering, contiguous or neighboring."³²

²⁸ 79 Fed. Reg. 22199.

²⁹ *Id.*

³⁰ *Id.*

³¹ U.S. Evtl. Prot. Agency, "What is a Watershed?," available at <http://water.epa.gov/type/watersheds/whatis.cfm>.

³² 79 Fed. Reg. 22199.

Under the rule, adjacent waters include those located in riparian or floodplain areas.³³

Expanding the definition of “adjacency,” will have unintended consequences for many local governments. Stormwater and floodwater infrastructure and facilities are often located in low-lying areas, which may be considered jurisdictional under the new definition. Since communities are highly dependent on these structures for public safety, we would encourage the agencies to assess the unintended consequences.

“Riparian Areas”—The proposed rule defines “riparian area” as “an area bordering a water where the surface or subsurface hydrology directly influence the ecological processes and plant and animal community structure in that area.” Riparian areas are transitional areas between dry and wet areas.³⁴ Concerns have been raised that there are very few areas within the U.S. that would not meet this definition, especially if a riparian area boundary remains undefined.

“Floodplains”—The proposed definition states that floodplains are defined as areas with “moderate to high water flows.”³⁵ These areas would be considered “water of the U.S.” even without a significant nexus. Under the proposed rule, does this mean that any area, that has the capacity to flood, would be considered to be in a “floodplain?”

Further, it is major problem for counties that the term “floodplain” is not tied to, or consistent with, the generally accepted and understood definition used by the Federal Emergency Management Agency (FEMA). Notwithstanding potential conflicts with other Federal agencies, the multiple federal definitions could create challenges in local land use planning, especially if floodplain designations are classified differently by various agencies.

Aside from potential conflicts between Federal agencies, this would be very confusing to landowners and complicated to integrate at the local level. These definitions could create conflict within local floodplain ordinances, which were crafted to be consistent with FEMA National Flood Insurance Program (NFIP) rules. It is essential that floodplain definitions be consistent between and among all Federal agencies.

“Neighboring”—“Neighboring” is a term used to identify those adjacent waters with a significant nexus. The term “neighboring” is used with the terms riparian areas and floodplains to define the lateral reach of the term neighboring.³⁶ Using the term “neighboring,” without limiting qualifiers, has the potential to broaden the reach of the CWA. No one county is alike, nor are the hydrologic and geological conditions across the U.S. Due to these unique challenges, it is often difficult to craft a one-size-fits-all regulatory approach without considering regional or local differences. Moreover, there could be a wide range of these types of differences within one state or region.

Recommendations:

- **Redraft definitions to ensure they are clear, concise and easy to understand**
- **Where appropriate, the terms used within the proposed rule should be defined consistently and uniformly across all federal agencies**

³³ *Id.*

³⁴ *Id.*

³⁵ *Id.*

³⁶ *Id.*

- **Create a national map that clearly shows which waters and their tributaries are considered jurisdictional**

The Section 404 Permit Program is Time-Consuming and Expensive for Counties

Ditches are pervasive in counties across the nation and, until recently, were never considered to be jurisdictional by the Corps. Over the years, numerous local governments and public agencies have expressed concerns that regional Corps offices sometimes require Section 404 permits for maintenance activities on public safety infrastructure conveyances. While a maintenance exemption for ditches exists on paper, in practice it is narrowly crafted. Whether or not a ditch is regulated under Section 404 has significant financial implications for local governments and public agencies.

In recent years, certain Corps districts have inconsistently found public safety ditches jurisdictional, both for construction and maintenance activities. Once a ditch falls under federal jurisdiction, the Section 404 permit process can be extremely cumbersome, time-consuming and expensive, leaving counties vulnerable to citizen suits if the federal permit process is not streamlined.

Based on our counties' experiences, while the jurisdictional determination process may create delays, lengthy and resource intensive delays also occur AFTER federal jurisdiction is claimed. Once jurisdictional, the project triggers application of other federal laws like environmental impact statements, National Environment Policy Act (NEPA) and the Endangered Species Act (ESA). These impacts involve studies and public comment periods, all of which can cost both time and money. And often, as part of the approval process, the permit requires the applicant to "mitigate" the environmental impacts of the proposed project, sometimes at considerable expense. There also may be special conditions attached to the permit for maintenance activities. These specific required conditions result in a lengthy negotiation process with counties. A number of California counties have communicated this process can easily take easily three or more years, with costs in the millions for one project.

One Midwest county studied five road projects that were delayed over the period of two years. Conservatively, the cost to the county for the delays was \$500,000. Some counties have missed building seasons waiting for federal permits. These are real world examples, going on now, for many our counties. They are not hypothetical, "what if" situations. These are actual experiences from actual counties. The concern is, if more public safety ditches are considered jurisdictional, more counties will face similar problems.

Counties are liable for ensuring their public safety ditches are maintained and there have been cases where counties have been sued for not maintaining their ditches. In 2002, in *Arreola v Monterey* (99 Cal. App. 4th 722), the Fourth District Court of Appeals held the County of Monterey (Calif.) liable for not maintaining a flood control channel that failed due to overgrowth of vegetation. Counties are legally responsible for public safety infrastructure, regardless of whether or not the federal agencies approve permits in a timely manner.

It is imperative that the Section 404 permitting process be streamlined. Delays in the permitting process have resulted in flooding of constituent and business properties. This puts our nation's counties in a precarious position—especially those who are balancing small budgets against public health and environmental protection needs.

The bottom line is, county ditch systems can be complex. They can run for hundreds of miles continuously. By their very nature, they drain directly (or indirectly) into rivers, lakes, streams and eventually the ocean. At a time when local governments throughout the nation are only starting to experience the beginnings of economic recovery,

proposing far reaching changes to CWA’s “waters of the U.S.” definition seems to be a very precarious endeavor and one which should be weighed carefully knowing the potential implications.

County Experiences with the Section 404 Permit Process

During discussions on the proposed “waters of the U.S.” definition change, the EPA asked NACo to provide several known examples of problems that have occurred in Section 404 jurisdictional determinations, resulting in time delays and additional expenses. These examples have been provided to the agencies.

One Midwest county received Federal Highway Authority funding to replace two old county bridge structures. The Corps determined that because the project would impact 300 feet of a roadside ditch, the county would have to go through the individual permit process. The county disagreed with the determination but decided to acquiesce to the Corps rather than risk further delay and the withdrawal of federal funding. The cost associated with going through the Corps process required the county to significantly scale back its intended project in order to stay on time and budget. Ultimately, the project’s completion was still delayed by several months.

The delay that can result from regulating local drainage features is evidenced by another Midwestern county that wanted to conduct a storm water improvement project to address local flooding concerns. The project entailed adding a second structure to a concrete box culvert and replacing a corrugated metal culvert. These structures were deemed jurisdictional by the Corps because they had a “bank on each side” and had an “ordinary high water mark. Thus, the county was forced to go through the individual permit process.

The delay associated with going through the federal permit process nearly caused the county to miss deadlines that would have resulted in the forfeiture of its grant funds. Moreover, because the project was intended to address flooding concerns, the delay in its completion resulted in the flooding of several homes during heavy rains. The county was also required to pay tens of thousands in mitigation costs associated with the impacts to the concrete and metal structures. Ultimately, no changes were recommended by the Corps to the project, and thus, no additional environmental protection was provided by going through the federal process.

Based on Current Practices—How the Exemption Provisions May Impact Counties

While the proposed rule offers several exemptions to the “waters of the U.S.” definition, the exclusions are vague and imprecise, and may broaden jurisdiction in a number of areas. Specifically, we are concerned about the exemptions on ditches and wastewater treatment systems.

“Ditches”— The proposed rule contains language to exempt certain types of ditches: 1) Ditches that are excavated wholly in uplands, drain only uplands, and have less than perennial flow and 2) Ditches that do not contribute flow, either directly or through another water, to a traditional navigable water, interstate water, the territorial seas or a jurisdictional impoundment.³⁷

For a ditch to be exempt, it must be excavated and drain only to a dry area and be wet less than 365 days a year. This is immediately problematic for counties. County ditches are not dug solely in dry areas, because they are designed to drain overflow waters to “waters of the U.S.”

Counties own and manage different types of public safety ditches—roadside, drainage, flood control, stormwater—that protect the public from flooding. They can run continuously for hundreds, if not thousands, of miles throughout

³⁷ *Id.*

the county. Very few county ditches just abruptly end in a field or a pond. Public safety ditches are generally dug in dry areas, run through a transition area, before connecting directly or indirectly to a "water of the U.S."

Under the proposed rule, if dry ditches eventually connect, directly or indirectly, to a "water of the U.S.," will the length of the ditch be considered jurisdictional waters? Or will portions of a dry ditch be considered exempt, even though the ditch's physical structure interconnects with a jurisdictional river or stream?

The exclusion also states that ditches that do not "contribute to flow," directly or indirectly to "waters of the U.S.," will be exempt. The definition is problematic because to take advantage of the exemption, ditches must demonstrate "no flow" to a river, stream, lake or ocean. Most ditches, by their nature, have some sort of flow in rain events, even if those ditches are dry most of the year. **Since the proposed rule indicates that perennial, intermittent or ephemeral flows could be jurisdictional, the agencies need to further explain this exclusion.³⁸ Otherwise, there will be no difference between a stream and a publicly-owned ditch that protects public safety.**

The agencies have reiterated that the proposed rule leaves in place the current exemption on ditch maintenance activities.³⁹ EPA has indicated this exemption is automatic and that counties do not have to apply for the exemption if they are performing maintenance activities on ditches. **However, in practice, our counties have reported the exemption is inconsistently applied by Corps districts across the nation. Over the past decade, a number of counties have been required to obtain special Section 404 permits for ditch maintenance activities.**

These permits often come with tight special conditions that dictate when and how the county is permitted to clean out the relevant ditch. For example, one California county has a maintenance permit for an earthen stormwater ditch. They are only permitted to clear grass and debris from the ditch six months out of the year due to ESA impacts. This, in turn, has led to multiple floodings of private property and upset citizens. In the past several years, we've heard from a number of non-California counties who tell us they must get Section 404 permits for ditch maintenance activities.

Some Corps districts give a blanket exemption for maintenance activities. In other districts, the ditch maintenance exemption is very difficult to obtain, with narrow conditions governing the types maintenance activities that are considered exempt. Additionally, a number of Corps districts are using the "recapture provision" to override the exemption.⁴⁰ Under the "recapture clause," previously exempt ditches are "recaptured," and must comply for the Section 404 permitting process for maintenance activities.⁴¹ Additionally, Corps districts may require documentation to original specifications of the ditch showing original scope, measurements, etc.⁴² Many of these ditches were hand-dug decades ago and historical documentation of this type does not exist.

Other districts require entities to include additional data as part of their request for an exemption. One Florida county applied for 18 exemptions at a cost of \$600,000 (as part of the exemption request process, the entity must provide data and surveying materials), three months later, only two exemptions were granted and the

county was still waiting for the other 16 to be granted. At that point, the county was moving into its seasonal rainy season and fielding calls from residents who were concerned about flooding from the ditches.

This is what is happening to counties now. If the approval process for ditch maintenance exemptions is not clarified and streamlined, more counties will experience delays in safeguarding and caring for these public safety ditches.

It is the responsibility of local governments to ensure the long-term operation and protection of public safety infrastructure. **The federal government must address problems within the current CWA Section 404 regulatory framework, to ensure that maintenance activities on public safety infrastructure do not require federal approval. Without significantly addressing these problems, the federal agencies will hinder the ability of local governments to protect their citizens.**

Recommendations:

- **Exclude ditches and infrastructure intended for public safety**
- **Streamline the current Section 404 permitting process to address the delays and inconsistencies that exist within the existing decision-making process**
- **Provide a clear-cut, national exemption for routine ditch maintenance activities**

"Waste Treatment Systems"—Water treatment refers to the process of taking waste water and making it suitable to discharge back to the environment. The term "waste treatment" can be confusing because it is often linked to wastewater or sewage treatment. However, this can also include water runoff from landscape irrigation, flushing hydrants, stormwater runoff from roads, parking lots and rooftops.

The proposal states that "waste treatment systems,"—including treatment ponds or lagoons, designed to meet the requirements of the CWA—are exempt.⁴³ In recent years, local governments and other entities have moved toward a holistic approach in treating stormwater by using ponds, swales and wetlands. Traditionally, such systems have been exempt from CWA, but due to the broad nature of the proposed rule, we believe the agencies should also exempt other constructed wetland and treatment facilities which may be included under the proposed rule. This would include, but not be limited to, water and water reuse, recycling, treatment lagoons, settling basins, ponds, artificially constructed wetlands (i.e. green infrastructure) and artificially constructed groundwater recharge basins.

It is important that all constructed features built for the purpose of water quality treatment or runoff control be exempt, whether or not it was built for CWA compliance. Otherwise, this sets off a chain reaction and discourages further investment which will ultimately hurt the goals of the CWA.

Recommendations:

- **The proposed rule should expand the exemption for waste treatment systems if they are designed to meet *any* water quality requirements, not just the requirements of the CWA**

⁴³ 79 Fed. Reg. 22199.

Counties Need Clarity on Stormwater Management and Green Infrastructure Programs

Under the CWA Section 402 National Pollution Discharge Elimination System (NPDES) permit program, all facilities which discharge pollutants from any point source into "waters of the U.S." are required to obtain a permit; this includes localities with a Municipal Separate Storm Sewer System (MS4). An MS4 is defined as a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains)" owned by a state, tribal, local or other public body, which discharge into "waters of the U.S."⁴⁴ They are designed to collect and treat stormwater runoff.

Since stormwater management activities are not explicitly exempt under the proposed rule, NACo is concerned that man-made conveyances and facilities for stormwater management could now be classified as a "water of the U.S."

In various conference calls and meetings over the past several months, the agencies have stressed that municipal MS4s will not be regulated as "waters of the U.S." However, EPA has indicated that there could be "waters of the U.S." designations within a MS4 system, especially if a natural stream is channelized within a MS4. This means an MS4 could potential have a "water of the U.S." within its borders, which would be difficult for local governments to regulate.

MS4s are subject to the CWA and are regulated under Section 402 for the treatment of water. However, treatment of water is not allowed in "waters of the U.S." This automatically sets up a conflict if an MS4 contains "waters of the U.S." Would water treatment be allowed in the "waters of the U.S." portion of the MS4, even though it's disallowed under current law? Additionally, if MS4s contained jurisdictional waters, they would be subject to a different level of regulation, requiring all discharges into the stormwater system to be regulated along with regulating discharges from a NPDES system.

The definitional changes could easily be interpreted to include the whole MS4 system or portions thereof which would be a significant change over current practices. It would also potentially change the discharge point of the MS4, and therefore the point of regulation. Not only would MS4 permit holders be regulated when the water leaves the MS4, but also when a pollutant enters the MS4. Since states are responsible for water quality standards of "waters of the U.S." within the state, this may trigger a state's oversight of water quality designations within an MS4. **Counties and other MS4 permittees would face expanded regulation and costs as they will now have to ensure that discharges from outfalls to these new "waters of the U.S." meet designated water quality standards.**

This would be problematic and extremely expensive for local governments to comply with these requirements. Stormwater management is often not funded as a water utility, but rather through a county or city general fund. If stormwater costs significantly increase due to the proposed rule, not only will it potentially impact our ability to focus available resources on real, priority water quality issues, but it may also require that funds be diverted from other government services such as education, police, fire, health, etc. Our county members cannot assume additional unnecessary or unintended costs.

Further, by shifting the point of compliance for MS4 systems further upstream, the proposed rule could reduce opportunities for establishment of cost effective regional stormwater management systems. Many counties and stormwater management agencies are attempting to stretch resources by looking for regional and integrated approaches for managing stormwater quality. The rule would potentially inhibit those efforts. Even if the agencies do not initially plan to treat an MS4 as a "water of the U.S.," they may be forced to do so as a result of CWA citizen suits that attempt to address lack of clarity in the proposed rule.

⁴⁴ 40 CFR 122.26(b)(8).

EPA has indicated these problems could be resolved if localities and other entities create "well-crafted" MS4 permits. In our experience, writing a well-crafted permit is not enough—localities are experiencing high levels of litigation from outside groups on approved permits that have been signed off by both the state and the EPA. A number of Maryland counties have been sued over the scope and sufficiency of their approved MS4 permits.

In addition, green infrastructure, which includes existing regional stormwater treatment systems and low impact development stormwater treatment systems, is not explicitly exempt under the proposed rule. A number of local governments, as well as private developers, are using green infrastructure as a stormwater management tool to lessen flooding and protect water quality by using vegetation, soils and natural processes to treat stormwater runoff. The proposed rule could inadvertently impact a number of these facilities by requiring Section 404 permits for green infrastructure construction projects that are jurisdictional under the new definitions in the proposed rule. Additionally, it is unclear under the proposed rule whether a Section 404 permit will be required for maintenance activities on green infrastructure areas once the area is established.

While jurisdictional oversight of these "waters" would occur at the federal level, actual water quality regulation would occur at the state and local levels, becoming an additional unfunded mandate on our counties and agencies.

Recommendations:

- **Explicitly exempt MS4s and green infrastructure from "waters of the U.S." jurisdiction**

States Responsibilities Under CWA Will Increase

While the EPA and the Corps have primary responsibility for water quality programs, everyday CWA implementation is shared with the states and local governments.⁴⁵ Under the CWA, states are required to identify polluted waters (also known as impaired waters) and set Water Quality Standards (WQS) for them. State WQS are intended to protect jurisdictional "waters of the U.S.," such as rivers, lakes and streams, within a state. As part of the WQS process, states must set designated uses for the waterbody (e.g. recreation, drinkable, fishable) and institute Total Maximum Daily Loads (TMDL) for impaired waters.

Currently, WQS regulation focuses on waters regulated under federal law, however, NACo is concerned the proposed rule may broaden the types of waters considered jurisdictional. This means the states will have to regulate more waters under their WQS and TMDL standards. This would be extremely costly for both the states and localities to implement.

In EPA's and the Corps economic analysis, it states the proposed rule "may increase the coverage where a state would...apply its monitoring resources...It is not clear that additional cost burdens for TMDL development would result from this action."⁴⁶ The data used to come to this conclusion is inconclusive. As discussed earlier, the agencies used data from 2009-2010 field practices for the Section 404 program as a basis for the economic analysis. This data is only partially relevant for the CWA Section 404 permit program, it is not easily interchangeable for other CWA programs.

Because of vague definitions used in the proposed rule, it is likely that more waters within a state will be designated as "waters of the U.S." As the list of "waters of the U.S." expand, so do state responsibilities for

⁴⁵ Cong. Research Serv., Clean Water Act: A Summary of the Law (Report RL 30030, October 30, 2014), Copeland, Claudia.

⁴⁶ Econ. Analysis of Proposed Revised Definition of Waters of the United States, U.S. Envtl. Prot. Agency (EPA) & U.S. Army Corps of Eng'r (Corps), (March 2014) at 6-7.

WQS and TMDLS. The effects on state nonpoint-source control programs are difficult to determine, but they could be equally dramatic, without a significant funding source to pay for the proposed changes.

Recommendation:

- **NACo recommends that the federal agencies consult with the states to determine more accurate costs and implications for the WQS and TMDL programs**

County Infrastructure on Tribal Lands May Be Jurisdictional

The proposed rule reiterates long-standing policy which says that any water that crosses over interstate lines—for example if a ditch crosses the boundary line between two states—falls under federal jurisdiction. But, this raises a larger question. If a ditch runs across Native American land, which is considered sovereign land, is the ditch then considered an “interstate” ditch?

Many of our counties own and maintain public safety infrastructure that runs on and through Native American tribal lands. Since these tribes are sovereign nations with self-determining governments, questions have been raised on whether county infrastructure on tribal land triggers federal oversight.

As of May 2013, 566 Native American tribes are legal recognized by the Bureau of Indian Affairs (BIA).⁴⁷ Approximately 56.2 million acres of land is held in trust for the tribes⁴⁸ and it is often separate plots of land rather than a solidly held parcel. While Native American tribes may oversee tribal roads and infrastructure on tribal lands, counties may also own and manage roads on tribal lands.

A number of Native American tribes are in rural counties—this creates a patchwork of Native American tribal, private and public lands. Classifying these ditches and infrastructure as interstate will require counties to go through the Section 404 permit process for any construction and maintenance projects, which could be expensive and time-consuming.

NACo has asked the federal agencies to clarify their position on whether local government ditches and infrastructure on tribal lands are currently regulated under CWA programs, including how they will be regulated under the final rule.

Recommendation:

- **We request clarification from the federal agencies on whether ditches and other infrastructure that cross tribal lands are jurisdictional under the “interstate” definition**

Endangered Species Act as it Relates to the Proposed Rule

NACo is concerned that provisions of the proposed rule may interact with provisions of the Endangered Species Act (ESA) and its implementing regulations in ways that may produce unintended negative outcomes.

For instance, when a species is proposed for listing as endangered or threatened under ESA, large swaths of land may be designated as critical habitat, that is essential to the species' protection and recovery. Critical

⁴⁷ U.S. Dept. of the Interior, Indian Affairs, *What We Do*, available at <http://www.bia.gov/WhatWeDo/index.htm> .

⁴⁸ *Id.*

habitat requires special management and conservation, which can have enormous economic impacts on county governments and private landowners.

This effect is intensified when the Section 404 permit program is triggered. Section 7 consultation under the ESA could be required, which can be time-consuming and expensive, especially for public safety projects. Some counties are already reporting strict ESA requirements on maintenance of public safety ditches.

To further compound the issue, the vague terms used in the proposed rule such as "floodplains," may also trigger ESA compliance. In recent years, the Federal Emergency Management Agency (FEMA) has been sued for not considering the habitat needs of threatened and endangered species in National Flood Insurance Program (NFIP) floodplain designations. Local governments in certain states, who participate in the NFIP, must now certify they will address ESA critical habitat issues in floodplain areas. **This litigation-driven approach circumvents local land use planning authority and creates an atmosphere of mistrust rather than providing incentives to counties and private landowners to actively engage in endangered species conservation.**

If the agencies plan to use broad definitions within the proposed rule, regulation by litigation would seem to be an increasingly likely outcome. These issues need to be carefully considered by the agencies.

Ensuring that Local Governments Are Able to Quickly Recover from Disasters

In our nation's history, our citizens have experienced both manmade and natural disasters. Counties are the initial line of defense, the first responders in protection of its residents and businesses. Since local governments are responsible for much of what constitutes a community—roads and bridges, water and sewer systems, courts and jails, healthcare, parks, and more—it is important that local governments quickly recover after disasters. This includes removing wreckage and trash from ditches and other infrastructure that are considered jurisdictional.⁴⁹

Counties in the Gulf Coast states and the mid-west have reported challenges in receiving emergency waivers for debris in ditches designated as "waters of the U.S." after natural and manmade disasters. This, in turn, damages habitat and endangers public health. NACo would urge the EPA and the Corps to revisit that policy, especially if more waters are classified as "waters of the U.S."

Conclusion

We appreciate the opportunity to be a part of this process. NACo acknowledges the efforts taken by both EPA and the Corps to conduct outreach on the proposed rule. This is a priority issue for our nation's counties who are responsible for environmental protection and public safety.

As stated earlier, we believe that more roadside ditches, flood control channels and stormwater management conveyances and treatment approaches will be federally regulated under this proposal. This is problematic because counties are ultimately liable for maintaining the integrity of these ditches, channels, conveyances and treatment approaches. Furthermore, the unknown impacts on other CWA programs are equally problematic, the degree and cost of regulation will increase dramatically if these features are redefined as "waters of the U.S." **We urge you to withdraw the rule until further study on the potential impacts are addressed.**

⁴⁹ Disaster Mitigation: Reducing Costs & Saving Lives: Hearing before the Subcomm. on Econ. Dev., Pub. Bldgs. & Emergency Mgmt., H. Comm. on Transp. & Infrastructure, 113th Cong. (2014) (statement of Linda Langston, President, Nat'l Ass'n of Counties).

We look forward to working together with our federal partners, as our founding fathers intended, to protect our nation's water resources for generations to come. If you have any questions, please feel free to contact Julie Ufner, NACo's Associate Legislative Director at Jufner@naco.org or 202.942.4269.

Sincerely,

RE: Proposed Rule on “Definition of “Waters of the United States” Under the Clean Water Act,” Docket No. EPA-HQ-OW-2011-0880

Dear Ms. Downing and Ms. Jensen:

On behalf of the nation’s mayors, cities, counties, regional governments and agencies, we appreciate the opportunity to submit comments on the U.S. Environmental Protection Agency’s (EPA) and the U.S. Army Corps of Engineers’ (Corps) proposed rule on “*Definition of “Waters of the United States” Under the Clean Water Act.*” We thank the agencies for educating our members on the proposal and for extending the public comment period in order to give our members additional time to analyze the proposal. We thank the agencies in advance for continued opportunities to discuss these, and other, important issues.

The health, well-being and safety of our citizens and communities are top priorities for us. To that end, it is important that federal, state and local governments all work together to craft reasonable and practicable rules and regulations. As partners in protecting America’s water resources, it is essential that state and local governments have a clear understanding of the vast impact that a change to the definition of “waters of the U.S.” will have on all aspects of the Clean Water Act (CWA). That is why several of our organizations and other state and local government partners asked for a transparent and straight-forward rulemaking process, inclusive of a federalism consultation process, rather than having changes of such a complex nature instituted through a guidance document alone.

As described below, we have a number of overarching concerns with the rulemaking process, as well as specific concerns regarding the proposed rule. In light of both, we have the following requests:

1. We strongly urge EPA and the Corps to modify the proposed rule by addressing our concerns and incorporating our suggestions to provide greater certainty and clarity for local governments; and
2. We ask that EPA and the Corps issue a revised proposed rule with an additional comment period, so that we can be certain these concerns are adequately addressed; or
3. Alternatively, if an additional comment period is not granted, we respectfully call for the withdrawal of this proposed rule and ask the agencies to resubmit a proposed rule at a later date that addresses our concerns.

Overarching Concerns with the Rulemaking Process

While we appreciate the willingness of EPA and the Corps to engage state and local government organizations in a voluntary consultation process prior to the proposed rule's publication, we remain concerned that the direct and indirect impacts of the proposed rule on state and local governments have not been thoroughly examined because three key opportunities that would have provided a greater understanding of these impacts were missed:

1. Additional analysis under the Regulatory Flexibility Act, which examines economic impacts on small entities, including cities and counties;
2. State and local government consultation under Executive Order 13132: Federalism, which allows state and local governments to weigh in on draft rules before they are developed or publicly proposed in order to address intergovernmental concerns; and
3. The agencies' economic analysis of the proposed rule, which did not thoroughly examine impacts beyond the CWA 404 permit program and relied on incomplete and inadequate data.

Additionally, we believe there needs to be an opportunity for intergovernmental state and local partners to thoroughly read the yet-to-be-released final connectivity report, synthesize the information, and incorporate those suggestions into their public comments on the proposed rule. These missed opportunities and our concerns regarding the connectivity report are discussed in greater detail below.

1. The **Regulatory Flexibility Act (RFA)** requires federal agencies that promulgate rules to consider the impact of their proposed rule on small entities, which under the definition includes cities, counties, school districts, and special districts of less than 50,000 people. RFA, as amended by the Small Business Regulatory Enforcement Fairness Act, requires agencies to make available, at the time the proposed rule is published, an initial regulatory flexibility analysis on how the proposed rule impacts these small entities. The analysis must certify that the rule does not have a Significant Economic Impact on a Substantial Number of Small Entities (SISNOSE). The RFA SISNOSE process allows federal agencies to identify areas where the proposed rule may economically impact a significant number of small entities and consider regulatory alternatives that will lessen the burden on these entities. The RFA process was not undertaken for this rule.

Based on analysis by our cities and counties, the proposed rule will have a significant impact on all local governments, but on small communities particularly. Most of our nation's cities and counties—more than 18,000 cities and 2,000 counties—have populations less than 50,000. The RFA SISNOSE analysis would be of significant value to these governments.

2. **Executive Order 13132: Federalism** requires federal agencies to work with state and local governments on proposed regulations that have substantial direct compliance costs. Since the agencies have determined that a change in the definition of “waters of the U.S.” imposes only indirect costs, the agencies state that the proposed rule does not trigger Federalism considerations. We wholeheartedly disagree with this conclusion and are convinced there will be both direct and indirect costs for implementation.

Additionally, while EPA initiated a Federalism consultation for its state and local partners in 2011, the process was prematurely shortened. In the 17 months between the initial Federalism consultation and the publication of the proposed rule, the agencies changed directions several times (regulation versus guidance). In those intervening 17 months between the consultation and the publication of the proposed rule, the agencies failed to continue substantial discussions, thereby not fulfilling the intent of Executive Order 13132.

3. The *Economic Analysis of Proposed Revised Definition of Waters of the U.S.* is flawed because it does not include a full analysis of the proposed rule’s impact on all CWA programs beyond the 404 program (including the National Pollutant Discharge Elimination System (NPDES), total maximum daily load (TMDL) and other water quality standards programs, state water quality certification process, and Spill Prevention, Control and Countermeasure (SPCC) programs). Since a number of these CWA programs directly affect state and local governments, it is imperative the analysis provide a more comprehensive review of the actual costs and consequences of the proposed rule on these programs.

Moreover, we remain concerned that the data used in the analysis is insufficient. The economic analysis used 2009-2010 data of Section 404 permit applications as a basis for examining the impacts of the proposed rule on all CWA programs. It is insufficient to compare data from the Section 404 permit program and speculate to the potential impacts to other CWA programs. Additionally, 2009-2010 was at the height of the recession when development (and other types of projects) was at an all-time low. The poor sample period and limited data creates uncertainty in the analysis’s conclusions.

In addition to the missed opportunities, we are concerned about the timing of the yet-to-be-finalized *Connectivity of Streams and Wetlands to Downstream Waters: A Review and Synthesis of the Scientific Evidence* report, which will serve as the scientific basis for the proposed rule. In mid-October, EPA’s Science Advisory Board (SAB), which was tasked with reviewing the document, sent a letter with detailed recommendations on how to modify the report. The SAB raised important questions about the scope of connectivity in their recommendations, which will need to be addressed prior to finalizing the report. We recommend EPA and the Corps pause this rulemaking effort until after the connectivity report is finalized to allow the public an opportunity to comment on the proposed rule in relation to the final report.

In a November 8, 2013 letter from the U.S. Conference of Mayors, National League of Cities and National Association of Counties to the Office and Management and Budget Administrator, we highlight the various correspondences our associations have submitted since 2011 as part of the guidance and rulemaking consideration process. (See attached.) We share this with you to demonstrate that we have been consistent in our request for a federalism consultation, concerns regarding the cost-benefit analysis, and concerns about the process and scope of the rulemaking. With these comments, we renew those requests.

Requests:

- Conduct an analysis to examine if the proposed rule imposes a significant economic impact on a substantial number of small entities per the Regulatory Flexibility Act.
- Initiate a formal state and local government federalism consultation process per Executive Order 13132: Federalism to address local government concerns and issues of clarity and certainty.
- Perform a thorough economic analysis inclusive of an examination of impacts of the proposed rule on all CWA programs using deeper and more relevant data. We urge the agencies to interact with issue-specific national associations to collect these data sets.
- Reopen the comment period for the proposed rule once the connectivity report is finalized for a minimum of 60 days.

Specific Concerns Regarding the Proposed Rule

As currently drafted, there are many examples where the language of the proposed rule is ambiguous and would create more confusion, not less, for local governments and ultimately for agency field staff responsible for making jurisdictional determinations. Overall, this lack of clarity and uncertainty within the language opens the door unfairly to litigation and citizen suits against local governments. To avoid such scenarios, setting a clear definition and understanding of what constitutes a “waters of the U.S.” is critical. We urge you to consider the following concerns and recommendations in any future proposed rule or final rule.

Key Definitions

Key terms used in the proposed rule such as “uplands,” “tributary,” “floodplain,” “significant nexus,” “adjacent,” and “neighboring” will be used to define what waters are jurisdictional under the proposed rule. However, since these terms are either broadly defined, or not defined at all, this will lead to further confusion over what waters fall under federal jurisdiction, not less as the proposed rule aims to accomplish. The lack of clarity will lead to unnecessary project delays, added costs to local governments and inconsistency across the country.

Request:

- Provide more specificity for proposed definitions such as “uplands,” “tributary,” “floodplain,” “significant nexus,” “adjacent,” “neighboring,” and other such words that could be subject to different interpretations.

Public Safety Ditches

While EPA and the Corps have publically stated the proposed rule will not increase jurisdiction over ditches, based on current regulatory practices and the vague definitions in the proposed rule, we remain concerned.

Under the current regulatory program, ditches are regulated under CWA Section 404, both for construction and maintenance activities. There are a number of challenges under the current program that would be worsened by the proposed rule. For example, across the country, public safety ditches, both wet and dry, are being regulated under Section 404. While an exemption exists for ditch maintenance, Corps districts inconsistently apply it nationally. In some areas, local governments

have a clear exemption, but in other areas, local governments must apply for a ditch maintenance exemption permit and provide surveys and data as part of the maintenance exemption request.

Beyond the inconsistency, many local governments have expressed concerns that the Section 404 permit process is time-consuming, cumbersome and expensive. Local governments are responsible for public safety; they own and manage a wide variety of public safety ditches—road, drainage, stormwater conveyances and others—that are used to funnel water away from low-lying areas to prevent accidents and flooding of homes and businesses. Ultimately, a local government is liable for maintaining the integrity of their ditches, even if federal permits are not approved by the federal agencies in a timely manner. In *Arreola v Monterey* (99 Cal. App. 4th 722), the Fourth District Court of Appeals held the County of Monterey, California liable for not maintaining a levee that failed due to overgrowth of vegetation.

The proposed rule does little to resolve the issues of uncertainty and inconsistency with the current exemption language or the amount of time, energy and money that is involved in obtaining a Section 404 permit or an exemption for a public safety ditch. The exemption for ditches in the proposed rule is so narrowly drawn that any city or county would be hard-pressed to claim the exemption. It is hard—if not impossible—to prove that a ditch is excavated wholly in uplands, drains only uplands and has less than perennial flow.

Request:

- Provide a specific exemption for public safety ditches from the “waters of the U.S.” definition.

Stormwater Permits and MS4s

Under the NPDES program, all facilities which discharge pollutants from any point source into a “waters of the U.S.” are required to obtain a permit, including local governments with Municipal Separate Storm Sewer Systems (MS4s). Some cities and counties own MS4 infrastructure that flow into a “waters of the U.S.” and are therefore regulated under the CWA Section 402 stormwater permit program. These waters, however, are not treated as jurisdictional waters since the nature of stormwater makes it impossible to regulate these features.

It is this distinction that creates a conflict between the stormwater program and the definition of “waters of the U.S.” in the proposed rule and opens the door to citizen suits. Water conveyances including but not limited to MS4s that are purposed for and servicing public use are essentially a series of open ditches, channels and pipes designed to funnel or to treat stormwater runoff before it enters into a “waters of U.S.” However, under the proposed rule, these systems could meet the definition of a “tributary,” and thus be jurisdictional as a “waters of the U.S.” The language in the proposed rule must be clarified because a water conveyance cannot both treat water and prevent untreated water from entering the system.

Additionally, waterbodies that are considered a “waters of the U.S.” are subject to state water quality standards and total maximum daily loads, which are inappropriate for this purpose. Applying water quality standards and total maximum daily loads to stormwater systems would mean that not only would the discharge leaving the system be regulated, but all flows entering the MS4 would be regulated as well. This, again, creates a conflict between the stormwater program and the definition of “waters of the U.S.” in the proposed rule.

Request:

- Provide a specific exemption for water conveyances including but not limited to MS4s that are purposed for and servicing public use from the “waters of the U.S.” definition.

Waste Treatment Exemption

The proposed rule provides that “waste treatment systems, including treatment ponds or lagoons, *designed to meet the requirements of the Clean Water Act*” (emphasis added) are not “waters of the U.S.” In recent years, local governments and other entities have moved toward a holistic approach in treating stormwater by using ponds, swales and wetlands. Traditionally, such systems have been exempt from the CWA, but due to the broad nature of the proposed rule, we believe the agencies should also exempt other constructed wetland and treatment facilities which may inadvertently fall under the proposed rule. This would include, but not be limited to, water and water reuse, recycling, treatment lagoons, settling basins, ponds, artificially constructed wetlands (i.e. green infrastructure) and artificially constructed groundwater recharge basins. Therefore, we ask the agencies to specifically include green infrastructure techniques and water delivery and reuse facilities under this exemption.

A. Green Infrastructure

With the encouragement of EPA, local governments across the country are utilizing green infrastructure techniques as a stormwater management tool to lessen flooding and protect water quality by using vegetation, soils and natural processes to treat stormwater runoff. These more beneficial and aesthetically pleasing features, which include existing stormwater treatment systems and low impact development stormwater treatment systems, are not explicitly exempt under the proposed rule. Therefore, these sites could be inadvertently impacted and require Section 404 permits for green infrastructure construction projects if they are determined to be jurisdictional under the new definitions in the proposed rule.

Additionally, it is unclear under the proposed rule whether a Section 404 permit will be required for maintenance activities on green infrastructure areas once the area is established. Moreover, if these features are defined as “waters of the U.S.,” they would be subject to all other sections of the CWA, including monitoring, attainment of water quality standards, controlling and permitting all discharges in these features, which would be costly and problematic for local governments.

Because of the multiple benefits of green infrastructure and the incentives that EPA and other federal agencies provide for local governments to adopt and construct green infrastructure techniques, it is ill-conceived to hamper local efforts by subjecting them to 404 permits or the other requirements that would come with being considered a “waters of the U.S.”

B. Water Delivery and Reuse Facilities

Across the country, and particularly in the arid west, water supply systems depend on open canals to convey water. Under the proposed rule, these canals would be considered “tributaries.” Water reuse facilities include ditches, canals and basins, and are often adjacent to jurisdictional waters. These features would also be “waters of the U.S.” and as such subject to regulation and management that would not only be unnecessarily costly, but

discourage water reuse entirely. Together, these facilities serve essential purposes in the process of waste treatment and should be exempt under the proposed rule.

Requests:

- Clarify the waste treatment exemption by stating that green infrastructure practices and water delivery and reuse facilities meet the requirements of the exemption.
- Expand the waste treatment exemption to include systems that are designed to meet *any* water quality requirements, not just the requirements of the CWA.
- Provide a specific exemption for green infrastructure and water delivery and reuse facilities from the “waters of the U.S.” definition.

NPDES Pesticide Permit Program

Local governments use pesticides and herbicides in public safety infrastructure to control weeds, prevent breeding of mosquitos and other pests, and limit the spread of invasive species. While the permit has general requirements, more stringent monitoring and paperwork requirements are triggered if more than 6,400 acres are impacted in a calendar year. For local governments who have huge swathes of land, the acreage limit can be quickly triggered. The acreage limit also becomes problematic as more waterbodies are designated as a “waters of the U.S.”

Additional Considerations

Finally, we would like to offer two additional considerations that would help to resolve any outstanding confusion or disagreement over the breath of the proposed rule and assist local governments in meeting our mutual goals of protecting water resources and ensuring public safety.

Appeals Process

Many of the definitions in the proposed rule are incredibly broad and may lead to further confusion and lawsuits. To lessen confusion, we recommend the agencies implement a transparent and understandable appeals procedure for entities to challenge agency jurisdictional determinations without having to go to court.

Request:

- Institute a straight-forward and transparent process for entities to appeal agency jurisdictional determinations.

Emergency Exemptions

In the past several years, local governments who have experienced natural or man-made disasters have expressed difficulty obtaining emergency clean-up waivers for ditches and other conveyances. This, in turn, endangers public health and safety and jeopardizes habitats. We urge the EPA and the Corps to revisit that policy, especially as more waters are classified as “waters of the U.S.” under the proposed rule.

Request:

- Set clear national guidance for quick approval of emergency exemptions.

Conclusion

On behalf of the nation’s mayors, cities, counties, regional governments and agencies, we thank you for the opportunity to comment on the proposed rule. Changing the CWA definition of “waters of the U.S.” will have far-reaching impacts on our various constituencies.

As local governments and associated agencies, we are charged with protecting the environment and protecting public safety. We play a strong role in CWA implementation and are key partners in its enactment; clean and safe drinking water is essential for our survival. We take these responsibilities seriously.

As partners in protecting America’s water resources, it is essential that state and local governments have a clear understanding of the vast impact the proposed “waters of the U.S.” rule will have on our local communities. We look forward to continuing to work with EPA and the Corps as the regulatory process moves forward.

Sincerely,

Tom Cochran

RE: EPA's Definition of "Waters of the U.S." Under the Clean Water Act Proposed Rule and Connectivity Report (Docket ID No. EPA-HQ-OA-2013-0582)

Dear Administrator Shelanski:

On behalf of the nation's mayors, cities and counties, we are writing regarding the U.S. Environmental Protection Agency (EPA) and the U.S. Army Corps of Engineers' (Corps) proposed rulemaking to change the Clean Water Act definition of "Waters of the U.S." and the draft science report, *Connectivity of Streams and Wetlands to Downstream Waters: A Review and Synthesis of the Scientific Evidence*, which EPA indicated will serve as a basis for the rulemaking. We appreciate that EPA and the Corps are moving forward with a rule under the Administrative Procedures Act, as our organizations previously requested, however, we have concerns about the process and the scope of the rulemaking.

Background

In May 2011, EPA and the Corps released Draft Guidance on Identifying Waters Protected by the Clean Water Act (Draft Guidance) to help determine whether a waterway, water body or wetland would be jurisdictional under the Clean Water Act (CWA).

In July 2011, our organizations submitted comments on the Draft Guidance, requesting that EPA and the Corps move forward with a rulemaking process that features an open and transparent means of proposing and establishing regulations and ensures that state, local, and private entity concerns are fully considered and properly addressed. Additionally, our joint comments raised concerns with the fact that the Draft Guidance failed to consider the effects of the proposed changes on all CWA programs beyond the 404 permit program, such as Total Maximum Daily Load (TMDL) and water quality standards programs and the National Pollutant Discharge Elimination System (NPDES) permit program.

In response to these comments, EPA indicated that it would not move forward with the Draft Guidance, but rather a rulemaking pertaining to the "Waters of the U.S." definition. In November 2011, EPA and the Corps initiated a formal federalism consultation process with state and local government organizations. Our organizations submitted comments on the federalism consultation briefing in December 2011. In early 2012, however, EPA changed course, putting the rulemaking on hold and sent a final guidance document to the Office of Management and Budget (OMB) for interagency review. Our organizations submitted a letter to OMB in March 2012 repeating our concerns with the agencies moving forward with a guidance document.

Most recently, in September 2013, EPA and the Corps changed course again and withdrew the Draft Guidance and sent a draft “Waters of the U.S” rule to OMB for review. At the same time, the agencies released a draft science report, *Connectivity of Streams and Wetlands to Downstream Waters: A Review and Synthesis of the Scientific Evidence*.

Concerns

While we acknowledge the federalism consultation process that EPA and the Corps began in 2011, in light of the time that has passed and the most recent developments in the process toward clarifying the jurisdiction of the CWA, we request that EPA and the Corps hold a briefing for state and local governments groups on the differences between the Draft Guidance and the propose rule that was sent to OMB in September. Additionally, if EPA and the Corps have since completed a full cost analysis of the proposed rule on all CWA programs beyond the 404 permit program, as our organizations requested, we ask for a briefing on these findings.

In addition to our aforementioned concerns, we have a new concern with the sequence and timing of the draft science report, *Connectivity of Streams and Wetlands to Downstream Waters: A Review and Synthesis of the Scientific Evidence*, and how it fits into the proposed “Waters of the U.S.” rulemaking process, especially since the document will be used as a basis to claim federal jurisdiction over certain water bodies. By releasing the draft report for public comment at the same time as a proposed rule was sent to OMB for review, we believe EPA and the Corps have missed the opportunity to review any comments or concerns that may be raised on the draft science report actually inform the development of the proposed rule. We ask that OMB remand the proposed rule back to EPA and the Corps and that the agencies refrain from developing a proposed rule until after the agencies have thoroughly reviewed comments on the draft science report.

While you consider our requests for additional briefings on this important rulemaking process and material, we also respectfully request additional time to review the draft science report. We believe that 44 days allotted for review is insufficient given the report’s technical nature and potential ramifications on other policy matters.

As partners in protecting America’s water resources, it is essential that state and local governments have a clear understanding of the vast affect that a change to the definition of “Waters of the U.S.” will have on all aspects of the CWA. We look forward to continuing to work with EPA and the Corps as the regulatory process moves forward.

Sincerely,

Tom Cochran

RE: Proposed Rule on “Definition of “Waters of the United States” Under the Clean Water Act,” Docket No. EPA-HQ-OW-2011-0880

Dear Ms. Downing and Ms. Jensen:

On behalf of the County Commissioners Association of Pennsylvania, representing all 67 counties in the commonwealth, I write to ask the U.S. Environmental Protection Agency (EPA) and U.S. Army Corps of Engineers (Corps) to withdraw the proposed rulemaking for the on the definition of “Waters of the United States” under the Clean Water Act,” as published in the Federal Register on April 21, 2014, and to amend the rule only after consideration of the comments received, and with a better understanding of existing state programs.

In Pennsylvania, there are more than 86,000 miles of waterways, from major rivers to local streams and creeks, to large lakes and small ponds. This commonwealth has a long history of taking our duty to protect water quality seriously. Our state Clean Streams Law, which is older than the federal Clean Water Act, clearly protects all waters of the commonwealth from pollution or potential pollution. Over the years, we have developed a strong set of regulations and permitting programs that are specific to Pennsylvania’s needs. In addition, counties and conservation districts make critical front-line decisions related to many aspects of waterway planning and management, including storm water management, flood mitigation and maintenance of dams and levees. We are familiar with the local environmental issues because we are on the ground in our counties every day, providing local response and oversight.

However, a complex web of laws, regulations and policies has made it increasingly difficult, less efficient and more costly for counties to undertake needed waterway infrastructure projects such as dams and levees, and storm water management. These projects are critical elements of public health and safety, helping to manage flooding events, assuring water quality and promoting sustainable land use and community development. As a priority for this year, Pennsylvania’s counties are encouraging a review of current federal and state laws and regulations with a goal of promoting more effective policies and procedures.

The confusing Waters of the U.S. definition proposed by EPA and Army Corps goes in the entirely opposite direction of this goal, tangling the web further rather than facilitating more efficient delivery of

environmental programs. We are very concerned that, despite the assertions of the EPA and Army Corps to the contrary, the proposed rule would modify and expand existing regulations which have been in place for over 25 years. For Pennsylvania, because of the strong tradition of state and local oversight that has been in place for decades, subjecting more waters to federal jurisdiction represents only a paper fix, increasing the paperwork, time and cost for acquiring additional federal permits without any actual improvement to water quality.

Pennsylvania's Clean Streams Law

Presentations made by the EPA have indicated that the proposed rule will help states protect their waters because two-thirds of the nation's states rely on the federal definition. However, other states, including Pennsylvania, apply jurisdiction to "waters of the state," which must be as inclusive as "waters of the U.S." but may be more inclusive. Pennsylvania's Clean Streams Law, enacted prior to the federal Clean Water Act, includes a definition of "waters of the commonwealth" which protects all of the state's "rivers, streams, creeks, rivulets, impoundments, ditches, watercourses, storm sewers, lakes, dammed water, wetlands, ponds, springs and other bodies or channels of conveyance of surface and underground water, or parts thereof, whether natural or artificial, within or on the boundaries" of the commonwealth. This statute also provides the foundation of delegation to the Pennsylvania Department of Environmental Protection (DEP) of the National Pollution Discharge Elimination System (NPDES) program under section 402 of the Clean Water Act.

While the Clean Streams Law is the principal governing statute regarding Pennsylvania's water quality, other state statutes addressing water quality and control include the Dam Safety and Encroachment Act (Act 325 of 1978), the Flood Plain Management Act (Act 166 of 1978), the Sewage Facilities Act (Act 537 of 1965), the Storm Water Management Act (Act 167 of 1978), the Water Resources Planning Act (Act 220 of 2002) and the Nutrient Management Act (Act 38 of 2005, replacing Act 6 of 1993). Under these laws, Pennsylvania has developed comprehensive regulations and an extensive permitting system to assure our water quality remains at the highest levels. In addition, our definition of "waters of the commonwealth" already covers the types of waters it appears the EPA and Army Corps are seeking jurisdiction over in the proposed Waters of the U.S. rule.

Despite these extensive protections already in place, EPA has continued to heavily rely on a 2013 Environmental Law Institute study, *State Constraints – State-Imposed Limitations on the Authority of Agencies to Regulate Waters Beyond the Scope of the Federal Clean Water Act*. This study, referenced in the background information supporting the rulemaking (though not in the rulemaking itself), fails to identify Pennsylvania's state statutes and regulations; in fact, there is no mention of the Clean Streams Law at all. Instead, the study proposes that the Waters of the U.S. rulemaking is needed to address states' regulatory loopholes, including Pennsylvania. Given that the background to the proposed rule states, "This proposal does not affect Congressional policy to preserve the primary responsibilities and rights of states to prevent, reduce, and eliminate pollution, to plan the development and use of land and water resources....under the CWA," we would hope that the EPA and Army Corps would withdraw this rule until such time as it has a better, and more accurate, understanding of existing state laws, regulations and programs developed pursuant to that primary responsibility.

Since it seems likely that the proposed Waters of the U.S. definition would expand the scope of waters under federal jurisdiction (as discussed below), this means new permits would be required for activities and waters that are already regulated under state law. In addition to the cost and time associated with preparing and filing these applications, many entities report that it is at least a 30-day wait for approval of a nationwide permit, as many as 60 days for approval of an isolated permit and up to 180 days or longer for an individual permit. If these permits are required for activities that are traditionally just routine maintenance, the expansion of jurisdiction creates a bureaucratic mess for what should be a simple task.

Further, states are required to expand their current water quality designations to protect jurisdictional waters, increasing reporting and attainment standards at the state level. Section 305(b) of the Clean Water Act requires a report from states that includes (among other items) a description of the water quality of all navigable waters in the state and an analysis of the extent to which they meet the 101(a)(2) goals of the Act. Any increase to do these surveys and reports (and to what gain?) will also create a cost for local governments as resources are used for these purposes rather than for on-the-ground projects that actually benefit water quality.

Again, the expansion of federal jurisdiction over waters, as interpreted in this proposed rule, would do nothing to better protect Pennsylvania's water resources, only create more paperwork, make permitting processes more costly and more time consuming – and ultimately, undermine the good work we have been doing in this state for decades.

State and Local Oversight

In addition to the oversight provided by the state's DEP, under the Pennsylvania Conservation District Law (Act 217 of 1945), all counties except Philadelphia were authorized to create a county conservation district "as a primary local government unit responsible for the conservation of natural resources in this Commonwealth and to be responsible for implementing programs, projects and activities to quantify, prevent and control nonpoint sources of pollution" (Section 2). County conservation districts bring a local perspective to balancing environmental protection with growth, including local geologic and topographic knowledge. In addition, their knowledge and experience of the issues in their communities lead to better management of resources, targeted technical assistance, educational guidance to landowners on matters such as reducing soil erosion, storm water management, dirt and gravel road pollution prevention, protection of water quality and prevention of hazardous situations such as floods.

The 66 districts also accept delegation agreements with DEP and the State Conservation Commission to implement nutrient management, permitting processes, wetland management, bridges, and erosion and sedimentation controls. The districts have three options – basic education, technical assistance (non-enforcement) and enforcement; twelve districts are enforcement districts. Conservation districts also cooperate with DEP regarding spraying for black fly populations along affected streams, and have been actively engaged in the development and implementation of Pennsylvania's Chesapeake Bay Watershed Implementation Plan to help meet the Total Maximum Daily Load (TMDL) goals set by the EPA.

Again, since the proposed Waters of the U.S. definition appears to expand the scope of waters under federal jurisdiction (as discussed below), it follows that EPA and Army Corps would have additional oversight responsibilities for those waters, undermining our successful model of local oversight. Not only is this duplicative, but this additional layer of permitting would be reviewed and approved by staff at EPA's regional offices, which cover several states. With such an expansive territory, it is far more difficult for EPA regional staff to be active regularly in the communities for which they work and to have the "boots on the ground" that can help develop solutions.

We urge the EPA and Army Corp to include counties in all decision-making processes as they develop new regulations and programs that will affect waterway infrastructure, including withdrawal of the currently proposed Waters of the U.S. definition until such local input can be considered. This way, counties may remain fully engaged as the foundation for local conservation and environmental problem-solving efforts.

Proposed Definition of “Waters of the U.S.”

The proposed Waters of the U.S. (hereafter referred to as WOTUS) definition would modify existing regulations regarding which waters fall under federal jurisdiction through the Clean Water Act. Its purpose is to clarify issues raised in U.S. Supreme Court decisions over the past decade or so that have created uncertainty over the scope of CWA jurisdiction. The newly proposed rule attempts to resolve this confusion by broadening the geographic scope of Clean Water Act jurisdiction, defining WOTUS under federal jurisdiction to include navigable waters, interstate waters, territorial waters, tributaries (ditches), wetlands and “other waters.” It also redefines or contains new definitions for key terms, such as adjacency, riparian area and flood plain.

While EPA and Army Corp claim that the intention is to provide more regulatory certainty for land developers, farmers and other businesses, the language used only results in additional confusion. A good regulation would be clear, so everyone – both regulator and regulated – knows what is allowed and when a permit is required. Instead, the key terms used by the proposed WOTUS definition are inadequately explained, even less clear than current law and raise important questions. Because the proposed definitions are vague, the only certainty is that this matter will be tied up in the courts and projects unnecessarily delayed for years to come, creating additional doubt within industries and communities across the state and assuring resources are devoted to administrative and legal burdens rather than actually protecting water quality.

The agencies further claim that the proposed rule is based on the best available science, yet they acknowledge that the final rule will be informed by the final version of the EPA’s Office of Research and Development synthesis of published peer-review scientific literature discussing the nature of connectivity and effects of streams and wetlands on downstream waters. The final connectivity report as of the submission of these comments, just days before the public comment deadline, has not yet been released, giving the public no opportunity to review it in conjunction with the language of the proposed rule. If the proposed rule is going to be revised based on the final connectivity report, will there be another public comment period once the rule is revised based on that data?

The EPA and Army Corps have indicated that the proposed WOTUS rule creates “bright line categories” of waters that are and are not jurisdictional. However, the definition’s reliance on the interconnectivity of waters in reality dulls this line, and the definition is so vague, it is difficult to tell where federal jurisdiction would actually end. The proposed regulation further claims to have a goal of greater predictability and consistency through increased clarity, but at the same it emphasizes “the categorical finding of jurisdiction for tributaries and adjacent waters was not based on the mere connection of a water body to downstream waters, but rather a determination that the nexus, alone or in combination with similarly situated waters in the region, is significant based on data, science, the CWA, and caselaw.” With all of these factors in play, how is it possible to draw a black and white line to determine jurisdiction?

This concern is highlighted by the Oct. 17 release by EPA’s Science Advisory Board Panel (SAB) of its review of the agency’s draft connectivity report. The more than 100-page SAB review agrees with EPA’s assessment that streams and wetlands are connected with larger water bodies such as rivers, lakes, estuaries and oceans, but also suggests that these “connections should be considered in terms of a connectivity gradient,” highlighting the difficulty in determining “bright line jurisdiction.” For this and many other reasons, the EPA and Army Corps would be well served to withdraw the proposed rule until the connectivity report has been finalized. Otherwise, the agencies may be missing a valuable opportunity to review comments or concerns raised in the final report that would inform development of the proposed rule.

The terminology and definitions used serve to illustrate how difficult it will be to determine what jurisdiction federal agencies have under the proposed rule. One of the more ambiguous terms defined within the proposed rule is that of “significant nexus,” a term which is to be used to determine jurisdictional waters on a case-by-case basis. This single term would essentially grant EPA and Army Corps jurisdiction over virtually all waters and connecting lands, because in reality, there is almost nothing from a hydrological standpoint that is not somehow connected or is not significant within the hydrologic cycle. This is a point the regulation seems to concede repeatedly as it refers to the important role of tributaries and adjacent waters in maintaining the chemical, physical and biological integrity of traditional navigable waters, interstate waters and the territorial seas, and by insisting that the effects of small water bodies in a watershed need to be considered in the aggregate. In addition, the proposed rule even indicates that a water body could in fact have a significant nexus *without* a hydrologic connection because it has a “functional relationship” with the traditional navigable water, interstate water or territorial sea, such as retention of flood waters or other pollutants that would otherwise flow downstream. In the alternative, attributes that may not be jurisdictional by themselves may be when considered in combination for the significant nexus test, and waters near a WOTUS could also be jurisdictional *without* a significant nexus if they are in the floodplain or a riparian area.

Despite the insistence of the EPA and Army Corps that the proposed rule does not expand the waters over which the agencies have jurisdiction, the reliance on this one term alone begs to differ. If there are waters the agencies do not intend to have jurisdiction over in this rule, that intention should be explicitly spelled out with clearer definitions and terminology.

Further, the Clean Water Act protects the chemical, physical and biological integrity of the nation’s waters. Generally, the three terms have always been considered together. However, throughout the proposed rule, and specifically in the term “significant nexus,” the terms are grouped differently – sometimes they are linked by an “and” (chemical, physical *and* biological) and sometimes they are linked by an “or” (chemical, physical *or* biological). How the terms are linked will have a huge impact on how this regulation is enforced, because it means the difference between whether all three must be present to create a significant nexus, or merely any one of the three. Why were the changes made and where will these changes have the biggest impact?

Similar uncertainty rests with the way “waters in the region” and “watershed” are used to determine a significant nexus, as it appears the two are being used interchangeably throughout the explanation. While the definition of “significant nexus” notes that a region of similarly situated waters could be the watershed that drains to the nearest traditional navigable water, interstate water or territorial sea, this reference to watersheds is included as an “i.e.” implying that the proposed rule could also be open to other interpretations of “region.” Further, the definition of “significant nexus” also refers to the ability of other waters to be evaluated as a “single landscape unit” – is this different than a region or a watershed, and if so, how?

It is also not clear what level of watershed the agencies intend to use to determine a significant nexus. For instance, Pennsylvania has six major watersheds – the Ohio, the Genesee, the Susquehanna, the Delaware, the Erie and the Potomac. The Chesapeake Bay watershed is also demarcated within commonwealth borders, and more than 50 percent of the state’s land drains to the Bay. Yet within each of these watersheds, the individual watersheds of smaller creeks and rivers have also been determined and are outlined in the Pennsylvania State Water Plan. By way of example, the State Plan designates four watersheds within York County (a county in southcentral Pennsylvania bordering the Susquehanna River), which have been further divided into nine sub-watersheds for storm water management and Rivers Conservation Plan purposes. Which level of watershed, or region, is purported to be the one that will determine the relationship or significant nexus to the nearest traditional navigable water, interstate water or territorial sea?

Other terminology used throughout the proposed rule only adds to the confusion about which waters will be considered to be Waters of the U.S. For instance, one of the supposed bright-line categories of jurisdiction is a water that is “adjacent” to a traditional navigable water, interstate water or territorial sea. Yet the definition of “adjacent” contains even more vague terms – bordering, contiguous or neighboring, the latter of which leads us to the floodplain or riparian area of a jurisdictional water. There are further references to “aquatic systems” incorporating navigable waters. As we have noted previously, all of these terms only highlight the interdependence of hydrological systems and implies that virtually every water has a nexus in some way to a traditional navigable water, interstate water or territorial sea. The proposed rule should be considerably clearer on which waters will be considered in the aggregate.

Practical Examples

CCAP shares several real world examples of the far-reaching impact of the proposed Waters of the U.S. rule.

Ditches: Roadside ditches common in rural areas could be brought under CWA regulation if they are determined to either flow to navigable waters (tributary) or are considered “adjacent” to a “water of the U.S.” or have a “significant nexus” to those waters, which would require a specific case-by-case determination by the agencies. These ditches typically do not have perennial flow and should be considered exempt from CWA jurisdiction. If they are not clearly exempted and are thus considered “waters of the U.S.”, more of these ditches will likely fall under federal jurisdiction and certain maintenance activities might require a CWA Section 404 permit.

In recent years, Section 404 permits have been required for ditch maintenance activities such as cleaning out vegetation and debris. Once a ditch is under federal jurisdiction, this permit process can be extremely cumbersome, time-consuming and expensive. While, in theory, a maintenance exemption for ditches exists, it is difficult for local governments to use the exemption. The federal jurisdictional process is not well understood and the determination process can be extremely cumbersome, time-consuming and expensive, creating legal vulnerabilities for communities that are responsible for maintaining these ditches, even if the federal permit is not approved in a timely manner. For example, in 2002, in *Arreola v Monterey* (99 Cal. App. 4th 722), the Fourth District Court of Appeals held the County of Monterey in California liable for not maintaining a levee that failed due to overgrowth of vegetation, even though the County argued that the Corps permit process did not allow for timely approvals.

Further, a ditch in a backyard or a swail could arguably be jurisdictional by the definition of “adjacent” or “significant nexus”, if it rains and the resulting water flow runs downhill to a stream. If a homeowner fills that ditch or swail in without a federal permit, what happens? Is that homeowner then subject to the extensive penalties found in the CWA, even if that individual met all other state and local permitting obligations intended to assure water quality is adequately protected?

Floodplain management: With thousands of miles of waterways in Pennsylvania, the ability to manage flood waters is critical, and there are concerns over how this proposed rule may impact counties’ public disaster response, mitigation and recovery processes with an unforeseen additional regulatory process. Many communities have public infrastructure to funnel water away from low-lying roads, properties and businesses. In recent years, our state has seen several major storms wreak havoc, such as Tropical Storm Lee and Hurricane Irene in the fall of 2011, which have taken substantial time and resources from which to recover. Combined with the impacts of rising flood insurance costs, the commonwealth’s counties seek to do as much as they can to implement mitigation projects and encourage municipalities to participate in the Community Rating System under the National Flood Insurance Program by undertaking a comprehensive approach to floodplain management. As with every other aspect of governance, though,

there are limited resources for such efforts and time is of the essence since the next big flooding event could occur at any time. Counties want to use the time and funding they have in the most effective way possible, but adding confusion and bureaucratic burdens to these waterway projects only makes it harder to take action that will keep our citizens out of harm's way.

Storm water/MS4s: Since storm water activities are not explicitly exempt under the proposed rule, concerns have been raised that Municipal Separate Storm Sewer System (MS4) ditches could now be classified as a "Water of the U.S." Some counties and cities own MS4 infrastructure including ditches, channels, pipes and gutters that flow into a "water of the U.S." and are therefore regulated under the CWA Section 402 storm water permit program. In various conference calls and meetings, the agencies have stressed that MS4s will not be regulated as "waters of the U.S." But since MS4s are essentially a series of ditches, pipes, and channels – all of which could fall under the tributary and adjacency definition – MS4s could easily be interpreted to be "waters of the U.S." This is a significant potential threat for local governments that own MS4 infrastructure because they would be subject to additional water quality standards (including total maximum daily loads) if their storm water ditches are considered a "water of the U.S." Not only would the discharge leaving the system be regulated, but all flows entering the MS4 would be regulated as well. And even if it is not the intent of the agencies to regulate MS4s, vague federal rules have been used by various outside groups to litigate for years, which may ultimately force the agencies to regulate MS4s unless they are explicitly exempted from the requirements.

In addition, green infrastructure is not explicitly exempt under the proposed rule. A number of local governments are using green infrastructure as a storm water management tool to lessen flooding and protect water quality by using vegetation, soils and natural processes. The proposed rule could inadvertently impact a number of these county-maintained sites by requiring Section 404 permits for non-MS4 and MS4 green infrastructure construction projects. Additionally, it is unclear under the proposed rule whether a Section 404 permit will be required for maintenance activities on green infrastructure areas once the area is established.

Chesapeake Bay TMDL: More than 50 percent of the land (more than 14 million acres) in Pennsylvania drains to the Chesapeake Bay, currently subject to Total Maximum Daily Load (TMDL) requirements as established by the EPA in 2010 pursuant to Section 303 of the Clean Water Act. The TMDL requirements set limits for the amount of nitrogen, phosphorus and sediment runoff into the Bay and its tidal tributaries, both from point sources like sewage treatment plants and nonpoint sources such as agricultural lands and storm water. Pennsylvania is currently in the process of implementing its Phase II Watershed Implementation Plan (WIP), whose primary goal has been to ensure local partners, including local governments, are engaged in helping to meet TMDL requirements. Under the state's WIP, landowners and local governments have implemented innovative green infrastructure to reduce storm water runoff, and the agriculture community has made significant investments into best management practices (BMPs) to reduce nutrient runoff, often going above and beyond requirements.

The 2014-2015 programmatic milestones in Pennsylvania's WIP include having county conservation district staff make field visits to farms to provide education and outreach materials on Pennsylvania's existing regulatory programs. The county conservation districts have also been engaging the farm community in the technical assistance necessary for implementation of BMPs. Grant funding continues to be focused on BMPs that provide cost-effective solutions for the reduction of nutrient and sediment loads to the Bay, including no till/conservation tillage, cover crops, conservation and nutrient management planning activities, and stream bank fencing using federal Chesapeake Bay Implementation Grant (CBIG) grant monies. The state DEP also plans to conduct a series of five to ten MS4 workshops and/or webinars across the state to educate the regulated community on the implementation of the MS4-PA General Permit 13, including TMDL plans and Chesapeake Bay Pollutant Reduction Plans. If the proposed WOTUS rule goes forward as is and federal jurisdiction is not clear, or is expanded, as a result,

Pennsylvania will have to go back to the drawing board to revisit all of the work it has already done on education and BMP implementation to provide new information on any new permitting requirements.

Furthermore, if states do not make progress toward achieving the TMDL goals, EPA has the option of strengthening permits, so if federal permits now become necessary under the WOTUS definition proposed by the agencies where they had not been required before, this would have a tremendous impact on the costs and burdens of compliance with the TMDL. It is very likely that the agricultural community would be unable to continue the positive work they have done thus far, and may even have difficulty maintaining those best management practices they have already put in place if new federal permits are required. In addition, the need for additional funding is already one of the challenges most consistently raised when it comes to complying with the TMDL; if the commonwealth is to continue its progress to meet nutrient and sediment reductions to improve the quality of the Chesapeake Bay, available funds must be put to use on the ground and not on needless paperwork and administrative burdens. However, the proposed WOTUS definition and the apparent expansion of jurisdiction make it almost certain this is what would happen, again doing nothing to assist Pennsylvania and its local governments with the goal of protecting our water resources.

Agriculture: Production agriculture is one of the top industries and economic drivers in the commonwealth, with more than 7.7 million acres devoted to farmland. Farmers, ranchers and even water quality advocates have noted that the proposed WOTUS regulation is likely to curtail many voluntary water quality improvement projects if such projects would trigger the cost and delay of seeking federal permits, and make it increasingly difficult to meet required water quality requirements.

We also note that state pesticide/herbicide programs and regulations will need to be reevaluated under the proposed WOTUS rule, as the EPA has a pesticide/herbicide permit for all Waters of the U.S. within threshold guidelines. This means anytime a pesticide/herbicide is applied on or near Waters of the U.S. a permit is needed, including strict program and paperwork requirements for pesticide use in communities of more than 10,000. In addition, the use of some pesticide products could be jeopardized by the proposed definition – for example, when farmers and other landowners seek to use land-based pesticides with labels that state “do not apply to water” or that require no-spray setbacks from jurisdictional waters to avoid potential spray drift. Confusion over what are federal “waters” may expose pest-control operators to litigation and threaten effective pest management.

Finances are already one of the single biggest factors in young people’s decision to get into the farming industry. Adding more uncertainty, compliance burdens and costs to their operations will not make it any more likely that this critical industry will have a viable future for the next generation.

Unexpected consequences: There are at least 13 different places in federal regulations that reference Waters of the U.S., either directly or through the definition of “navigable waters”. For instance, Part 120 of the CFR, oil spill prevention regulations, requires a permit anytime an individual uses equipment or tanks around navigable waters; that permit includes requirements for spill prevention kits, training and emergency plans. The term is also referenced regarding oil pollution prevention under Part 112, which applies to homeowners that have oil tanks near navigable waters, and Part 116 related to hazardous substance and planning. CWA Section 311 covers oil spill prevention and preparedness, reporting obligations, and response planning requirements that apply to facilities engaged in production or storage of oil products based on total volume. In particular, inland non-transportation oil facilities of a certain size that have potential to discharge to navigable waters must prepare and implement Spill Prevention, Control, and Countermeasure (SPCC) plans.

While these are all important elements of protecting water quality, it does not appear the agencies have fully reviewed the far-reaching implications of the proposed definition and what the uncertainty it

provides will mean in the broader picture. And with the potential for civil suits and civil penalties of \$7,000 per day for violations of the Clean Water Act for individual homeowners, businesses, farmers, governments and others, it is critical that the agencies get this definition right and that it is clear and explicit.

Determination of Jurisdiction

The proposed rule's introduction also notes that there are other tools and approaches underway to increase efficiency in determining whether waters are covered, including improving the precision of desk-based jurisdictional determinations. In addition, the agencies indicate that information derived from a field observation may not be required in cases where a desktop analysis can provide sufficient information to make the requisite finding. While we understand the use of such desktop tools may be more efficient from a human resource perspective, we are concerned about the potential for over-reliance on these tools that seems to be suggested here. Several times in recent years, we have seen significant errors in modeling and other output because the data cannot always accurately reflect what is happening on the ground. For instance, as new FEMA flood maps are established throughout the state, communities have discovered technical problems in which topography indicated a flood zone would exist but a corresponding hydraulic study would have shown otherwise, had the maps been checked for real-world accuracy. In relationship to the Chesapeake Bay, the Land Use Model does not yet fully account for all BMPs, and often shows that Pennsylvania has made less progress than we see in our communities. On top of the confusion the proposed rule already creates, an over-reliance on desktop tools may create inaccurate jurisdictional determinations that will take more time and resources to resolve.

Other Questions

To what extent are tributaries considered Waters of the U.S.? Tributary streams are to be considered jurisdictional by rule under this proposal. Yet the proposed rule does not appear to limit the claimed jurisdiction to just waters that are direct tributaries to navigable waters, but also claims the entire network of perennial, intermittent, ephemeral and headwater streams, noting that the water must be part of a tributary system or network of tributaries that drains to a jurisdictional water. The defining characteristic of a tributary seems to be whether the water *ever* eventually flows to a jurisdictional water, not whether it is a *direct* tributary of a jurisdictional water. Is this accurate?

How will the jurisdiction of a ditch be determined? The proposed rule states that man-made conveyances are considered jurisdictional tributaries if they have a bed, bank and ordinary high water mark, and flow directly or indirectly into an interstate water, territorial sea or their impoundments, regardless of perennial, intermittent or ephemeral flow. There is an exemption for certain types of upland ditches with less than perennial flow or those that do not contribute flow to a WOTUS. But based on the uncertainty of terminology, what does "contribute flow" mean, and how will "do not contribute flow" in the exemption be determined? How would this be proven (i.e. what tests would be used?). Who would have the onus to prove the ditch does not contribute to flow – the agencies or the permittee?

How is indirect flow determined? Also, when determining an indirect flow, the proposed rule says that an indirect flow is one that is "through another water" – does this mean that if more than one water stands between the ditch and the jurisdictional water, that ditch would not be considered to flow into the jurisdictional water? Or would jurisdiction be established regardless of how many "other waters" stand between the ditch and the jurisdictional water? Given that tributaries are supposed to be a "jurisdictional by rule" category (i.e., a bright line category), this uncertainty should be resolved, preferably by narrowing the scope of the indirect flow rather than expanding it.

What are uplands? In the Q&A document issued by EPA, the agency defines an “upland” as used in the proposed rule as any area that is not a wetland, stream, lake or other water body, and further explains that upland areas can exist in floodplains. On page 22207 of the proposed rule’s explanation, there is a statement that absolutely no uplands located in riparian areas and floodplains can ever be WOTUS subject to jurisdiction of the CWA. We have difficulty finding where either of these concepts is detailed in the proposed definition or the explanation and recommend that a definition be provided in the rule to avoid future confusion.

Why is perennial flow not defined within the proposed regulation itself? In the explanation of the proposed rule on page 22203, the agencies note that perennial flow means that water is present in a tributary year round when rainfall is normal or above normal. Yet there is no reference to this definition in the proposed regulation itself – why? The agencies indicate they are seeking comment on the appropriate flow regime for a ditch with regard to the (b)(3) exclusion; will this become part of a definition in a final rule and will there be an opportunity to comment if so?

Can jurisdiction change along the length of a ditch? The proposed definition creates a three-part test for ditches to be excluded – must be excavated wholly in uplands, drain only in uplands, and have less than perennial flow. Does this mean that a ditch that stretches for miles, which meets this definition in part but not in whole, would not be exempt? Or that parts of the ditch could be exempt while others are not? It seems that the entire ditch would be jurisdictional, as there is a reference on page 22203 that indicates ditches that meet these conditions for exclusion for their entire length are not tributaries nor are they Waters of the U.S., implying that those ditches that do not meet all three parts of the exclusion would be jurisdictional. Is this a correct interpretation?

What does the term “incidental to construction” mean? The proposed rule excludes “water-filled depressions created incidental to construction activity.” Many construction projects have such ditches or depressions for foundations or footers that do not appear or disappear overnight. How will “incidental” be determined to qualify for the exclusion?

To what extent does distance factor into the determination of “significant nexus”? The definition of “significant nexus” makes a reference to distance as a factor – located “sufficiently close” together or “sufficiently close” to a WOTUS so they can be evaluated as a single landscape unit. The agencies also note that there has always been an element of “reasonable proximity” in evaluating adjacency (page 22207), even though this term is not actually found in the proposed definition. The agencies further acknowledge that the distance between water bodies may be far enough that the presence of a hydrologic connection does not support an adjacency determination, even though by definition, only the hydrologic connection would matter and not the distance separating the bodies. If the agencies intend, as described, to interpret the definition of neighboring to not include wetlands a great distance from a jurisdictional water, then perhaps a distance factor should be more clearly written into the definition instead of left up to interpretation.

Why is there a separate definition for floodplains in this proposed rule? FEMA has been working with states and local jurisdictions to update its Flood Insurance Rate Maps over the past several years, and state and local governments are adopting and updating hazard mitigation plans based on those maps. The Biggert-Waters Flood Insurance Reform Act of 2012 required FEMA to contract to prepare a Report on how FEMA can improve interagency and intergovernmental coordination on flood mapping, which was released in November 2013. Given all of the work that has already been going into the new FEMA flood maps and the emphasis on stakeholder coordination, we believe it would make more sense if EPA and Army Corps worked off the same understanding of what a floodplain is.

EPA and Army Corps also seem confused among themselves on what standard they based their definition of floodplain. While the explanation of the proposed rule indicates that the definition of floodplain used is scientifically based (page 22207), question 17 of EPA's Q&A document states "The proposed rule does not define floodplain because there is no scientific consensus on how to do so." It is further difficult to believe that adjacent (or neighboring) waters in a floodplain are to be determined on a case-by-case basis on the best professional judgment of which flood interval to use – here described as the 10- or 20-year flood zone (22209). If the standard can keep changing, how does this create a bright line category for a jurisdictional water? In addition, the commonly understood distinction between floodplains as used by FEMA is a 100-year or 50-year flood zone. Consistency among federal agencies, and among federal, state and local government, should be considered instead.

Connectivity Study

Finally, as noted earlier, we also believe that the underlying science of the proposed rule has not been fully vetted by the agencies in collaboration with the public to allow the rule to move forward. A public comment period should be opened on the final Connectivity Report when the report is finalized with the SAB recommendations attached, with further public comment on the proposed rule after the Connectivity Report is finalized as well.

Conclusion

The Waters of the U.S. definition proposed by EPA and Army Corps is confusing and so vague as to lead to interpretations of broadened jurisdiction for the federal government. Such expansion is wholly unnecessary here in Pennsylvania, where we have long had a comprehensive laws and regulations and a strong tradition of state and local oversight in place to protect our waterways.

The agencies have indicated their belief that the proposed rule provides greater clarity as to what waters are subject to CWA jurisdiction, thereby reducing the need for permitting authorities, including states, to make case-specific determinations, and leaving them with more resources to protect their waters. Pennsylvania's counties disagree with this analysis, and believe this proposed rule will certainly have a negative impact on our ability to protect our waters by adding a layer of federal permitting where it has not been needed before. Creating this level of confusion and uncertainty guarantees we will spend far more time and resources arguing over who has jurisdiction and what permits and paperwork must be completed, with no actual benefit or improvement to water quality.

Further, with expanded federal jurisdiction under this proposed rule, the permitting and decision making processes will be removed several levels. The benefits of local county and state knowledge working on the ground will be lost, sowing distrust between communities and regulators they never see and with whom they lack a similar relationship.

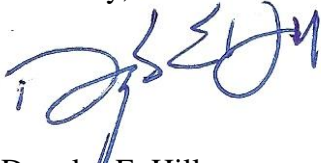

A good regulation would engage state governments, local communities and affected industries as active partners in the regulatory decision-making process. Instead, the proposed regulations seek to federalize many of the land use and community and economic development decisions that should be made by state officials and local communities. Without a clear line on what is in and what is out of WOTUS jurisdiction, it will be difficult for agriculture, industry and other businesses to plan for the future. We must achieve a better balance to assure the clarity sought in the proposed rule is in fact achieved and that additional burdens are not unintentionally and unnecessarily added to our efforts to protect water quality throughout the commonwealth.

We respectfully request that the agencies withdraw the proposed rule, and amend the rule in conjunction with input from local governments only after the final connectivity report is released,

after consideration of the comments received and with a better understanding of existing state programs. CCAP would be pleased to work with the agencies to assist in assuring that the clarity sought in the proposed rule is in fact achieved and that additional burdens are not unintentionally and unnecessarily added to our efforts to protect water quality throughout the commonwealth.

We thank you for your attention to these comments. If you have any questions or would like to discuss further, please do not hesitate to contact Lisa Schaefer, CCAP Director of Government Relations, at lschaefer@pacounties.org or 717-526-1010 x 3148.

Sincerely,

A handwritten signature in blue ink, appearing to read 'DEH', is written over a faint, illegible printed name.
